Chapter 1

Term 1

1.1 To complete a bar graph¹

1.1.1 MATHEMATICS

1.1.2 Meet Bonny and Tommy

1.1.3 EDUCATOR SECTION

1.1.4 Memorandum

The educator must help the learners to obtain the information on their birthdays in class so that they can complete the bar graph.

Let the learners raise their hands to show in which month their birthdays are. Count how many learners have birthdays in that month. The learners write this information in the circle above each month.

for example: three children have their birthdays in January. The 3 is written in the circle above Jan.

This can be a class activity.

It is also a good opportunity to learn the names of the months in the correct sequence. It is not required of them to write the names of the months at this stage.

Give the learners enough time to discuss their findings, make deductions and draw conclusions after they have completed the bar graph.

1.1.5 LEANER SECTION

1.1.6 Content

1.1.6.1 ACTIVITY: To complete a bar graph [LO 5.4, LO 5.5]

Bonny and Tommy are 8 years old and their birthday is on 13 May.

Then they will be ______ years old.

- They want to know when your birthdays are. Do you know when your birthday is?
- Now you must help me! (Do you know the names of the months?)
- Put up your hand if I mention the name of the month in which your birthday falls. I will count how many friends have a birthday in each month.
- Write this number in the circle above the name of the month.

¹This content is available online at http://cnx.org/content/m22690/1.1/>.

Jan.	Feb.	March	Apr.	May	June	July	Aug.	Sept.	Oct.	Nov.	Dec.

Table 1.1

• Now we can complete the birthday graph.

Make an X to represent each friend in the month in which his or her birthday falls.

- 1. In which month(s) do most of the friends have their birthdays?
- 2. In which month(s) do the fewest of the friends have their birthdays?
- 3. What in the graph can change?
- 4. Why can it change?
- 5. What cannot change?

Draw a birthday cake with candles on. I want to see how old you are.

Table 1.2

1.1.7 Assessment

Learning Outcome 5: The learner will be able to collect, summarise, display and critically analyse data in order to draw conclusions and make predictions, and to interpret and determine chance variation.

Assessment Standard 5.4: We know this when the learner reads, interprets and reports on information in own and a peer's representations of data;

Assessment Standard 5.5: We know this when the learner reads and interprets data presented in simple tables and lists.

Table 1.7

• Tommy is hiding from Bonny. Help her to find him. Add 3 and follow the number path.

Figure 1.7

Hurrah! Here is Tommy!

• Now help Bonny to find her way back home.

Figure 1.8

Bonny and Tommy are working on the computer. They are entering these numbers.

• Complete:

Figure 1.9

- There are 5 tricycles in the store. How many wheels do you see?
- _____ wheels. Draw the wheels for every tricycle.

LO 1.1

Table 1.8

1.2.7 Assessment

Learning Outcome 1: The learner will be able to recognise, describe and represent numbers and their relationships, and to count, estimate, calculate and check with competence and confidence in solving problems.

Assessment Standard 1.1: We know this when the learner counts forwards and backwards in:

1.1.1 the intervals specified in grade 2 with increased number ranges;

Assessment Standard 1.2: We know this when the learner reads and interprets data presented in simple tables and lists.

Assessment Standard 1.3: We know this when the learner knows, reads and writes number symbols and names from 1 to at least 1 000;

Assessment Standard 1.6: We know this when the learner solves money problems involving totals and change in rands and cents, including converting between rands and cents;

Assessment Standard 1.10: We know this when the learner uses the following techniques:

- 1.10 uses the following techniques:
- 1.10.1 building up and breaking down numbers;
- 1.10.2 doubling and halving;
- 1.10.3 number-lines;
- 1.10.4 rounding off in tens.

1.3 Number sentence³

1.3.1 MATHEMATICS

1.3.2 Meet Bonny and Tommy

1.3.3 EDUCATOR SECTION

1.3.4 Memorandum

p. 1: When you begin with operations, make the learners aware that the four operations (addition, multiplication, subtraction and division) involve only two different processes:

Two processes Together Separate

This includes concepts like: Add together JoinAltogether Take awaySeparateHand out/Divide

Four signs $+ x _$,

different groups equal groups different groups equal groups

Look at schematic representations

$$+12 + 14 = 35 - 26 - 12 = 14$$

$$x5 \times 3 = 15 \ 30 \ 3 = 10$$

The more the learners see this representation, and hear the explanation, the better they will understand and be able to apply it when solving problems.

The learners must understand the commutative property of addition

(3+4=7 and 4+3=7) and multiplication ($2 \times 5=10 \text{ and } 5 \times 2=10$), but they need not know or use the words "commutative property".

 $^{^3}$ This content is available online at <http://cnx.org/content/m22695/1.1/>.

- p. 2: The learners must understand the associative property of subtraction
- (9-4=5 and 9-5=4) and division (10,2=5 and 10,5=2).
- p. 3: Learners must first experience with concrete objects how the answers to the subtraction operations can be checked: return what you have taken away and if you have the number you began with, you know your answer is correct. Later this can then be done in writing.

Encourage them to check regularly and later they will do it automatically.

1.3.5 LEANER SECTION

1.3.6 Content

1.3.6.1 ACTIVITY: Number sentence [LO 1.9]

• Bonny has read 3 books and Tommy has read 4 books. Together they have read 7 books.

Number sentence: 3 + 4 = 7

Figure 1.10

Let's have Bonny and Tommy change places:

Number sentence: 4 + 3 = 7

Figure 1.11

• The numbers on either side of the + sign can change places without the answer changing!

Figure 1.12

• Do the same with:

Figure 1.13

LO 1.9

Table 1.9

• Mom gives Bonny and Tommy 9 apples. Bonny takes 4 apples. There are 5 apples left for Tommy.

Number sentence: 9 - 4 = 5

Figure 1.14

• Now let's give Tommy's apples first:

Number sentence: 9 - 5 = 4

Figure 1.15

The numbers on either side of the = sign can change places. Watch 9 - 4 = 5

carefully! 9 - 5 = 4 Now do the same with:

9	-	3	= 6	Change them:	9 - 6 = 3
8	-	2	=		8 - 6 =
3	-	1	=		3 =
6	-	4	=		6 =
7	-	5	=		7 =
4	-	2	=		4 =
8	-	6	=		8 =
5	-	3	=		5 =
9	-	2	=		9 =

Figure 1.16

• Tommy cannot remember how much money he had in his purse this morning. He knows that he bought fruit for R5 and he now has R3 left. Help him. How much did he have this morning?

LO 1.9

Table 1.10

• Bonny and Tommy want to know if their subtraction number sentences are correct. We can help them to check their sums.

Number sentence: 9 - 4 = 5

Figure 1.17

Check! Put everything you took away and everything that was left, together again. If you have the same number that you started with, your calculation is correct.

• Now do the sums and check your answer every time:

5	75 <u>7</u> ×	1	=	4	Check:	I	+	4	=	5	
7	2	2	=			2	+		=		
6	-	1	=			1	+		=		
5	-	3	=			3	+		=		
8	-	5	=			5	+		=		
9	_	2	=				+		=		
4	_		=				+		=		
7	-	4	=				+		=		
8	-	6	=				+		=		
6	-	4	=				+		=		
16	-	2	=			2	+		=	16	
19	-	3	=			3	+		=	19	
14	_	4	=			4	+		=	L	
18	-	5	=			5	+		=	18	
17	-	3	=			3	+		=		
15	-	4	=				+		=		
13	-	2	=				+		=		
11	_	1	=				+		=		

Figure 1.18

1.3.7 Assessment

Learning Outcome 1: The learner will be able to recognise, describe and represent numbers and their relationships, and to count, estimate, calculate and check with competence and confidence in solving problems.

Assessment Standard 1.9: We know this when the learner performs mental calculations involving:

- 1.9.1 addition and subtraction for numbers to at least 50;
- 1.9.2 multiplication of whole numbers with solutions to at least 50.

1.4 Even and uneven numbers⁴

1.4.1 MATHEMATICS

1.4.2 Meet Bonny and Tommy

1.4.3 EDUCATOR SECTION

1.4.4 Memorandum

Up to Grade 2 the learners used the word "ones" for "units" but as from Grade 3 we change to "units". Explain it to the learners.

Use concrete objects and help the learners to discover for themselves what even and uneven numbers are. Do this to 9 at first.

Help them to discover the pattern from 11 to 19.

When they have discovered the pattern of 2 4 6 8 0 on the unit side for even numbers and 1 3 5 7 9 on the unit side for uneven numbers, they have fun applying this to higher numbers.

1.4.5 LEANER SECTION

1.4.6 Content

1.4.6.1 ACTIVITY: Even and uneven numbers [LO 1.4, LO 2.2, LO 1.9, LO 1.8]

• Complete the pattern with numbers:

Figure 1.19

All the CIRCLES belong to Tommy. He has all the numbers with a

1 on the side of the ones (units). All his numbers are therefore uneven numbers.

• Sort Bonny's and Tommy's numbers:

⁴This content is available online at http://cnx.org/content/m22700/1.1/>.

• Match the right words: equal to; greater than; less than.

7	is equal to	3 + 4
8	is	1 + 8
2 + 7	is	7
6 + 3	is	3 + 6
4 + 4	is	5 + 4
12	is	10 + 2
40 + I	is	14

Figure 1.22

• We can replace the words with signs:

Figure 1.23

Figure 1.24

Table 1.13

1.4.7 Assessment

Learning Outcome 1: The learner will be able to recognise, describe and represent numbers and their relationships, and to count, estimate, calculate and check with competence and confidence in solving problems.

Assessment Standard 1.4: We know this when the learner orders, describes and compares the following numbers:

- 1.4.1 whole numbers to at least 3-digit numbers;
- 1.4.2 common fractions including halves, quarters and thirds;

Assessment Standard 1.8: We know this when the learner can perform calculations, using appropriate symbols, to solve problems involving:

- 1.8.1 addition and subtraction of whole numbers with at least 3 digits;
- 1.8.2 multiplication of at least whole 2-digit by 1-digit numbers;
- 1.8.3 division of at least whole 2-digit by 1-digit numbers;
- 1.8.4 estimation;

Assessment Standard 1.9: We know this when the learner performs mental calculations involving:

- 1.9.1 addition and subtraction for numbers to at least 50;
- 1.9.2 multiplication of whole numbers with solutions to at least 50.

Learning Outcome 2: The learner will be able to recognise, describe and represent patterns and relationships, as well as to solve problems using algebraic language and skills.

Assessment Standard 2.2: We know this when the learner copies and extends simple number sequences to at least 1 000.

1.5 Numbers⁵

1.5.1 MATHEMATICS

1.5.2 Meet Bonny and Tommy

1.5.3 EDUCATOR SECTION

1.5.4 Memorandum

Learners must know the words "horizontal" and "vertical" and know what they mean.

Make sure that the learners understand the role of the nought (0) as a placeholder in numbers without units, like 10, 20, 30, 40 etc. This is particularly important for vertical operations.

 $^{^5{}m This\ content\ is\ available\ online\ at} < {
m http://cnx.org/content/m22709/1.1/>}.$

 $\mathbf{Figure} \ \mathbf{1.25}$

• Use the number line and fill in 3 places after:

5 :	1 :	6 :	2 :
15 :	11 :	16:	12 :
25 :	21 :	26 :	22 :
35 :	31 :	36 :	32 :
4 5 :	41 :	46 :	42 :

Figure 1.26

• Fill in 2 places before:

4:	7 :	3 :	8 :
14:	17 :	13 :	18:
24 :	27 :	23 :	28 :
34 :	37 :	33 :	38 :
44 :	47 :	43 :	48 :

Figure 1.27

Table 1.14

• Compare the numbers with each other:

6		is 2 more than	4	
16	is	than	14	
3	is	than	6	
13	is	than	16	
7	is	than	3	
17	is	than	13	
27	is	than	23	
		is 2 more than	5	
		is 2 less than	8	
		is I more than	q	
		is 3 less than	4	

Figure 1.28

• Bonny and Tommy want to write their sums in a different way.

Figure 1.29

LO 1.8

 Table 1.15

Complete the patterns: Do the same with:

Figure 1.30

LO~2.2

Table 1.16

• Bonny says: it is much easier to work with numbers if you separate the tens and the units.

She renames the numbers, e.g. 36 = 30 + 6

• Tommy says: sometimes you have to group the numbers differently after you have separated them.

He then regroups the numbers, e.g. 30 + 6 = 20 + 10 + 6

• Put the tens and units back together again:

$$30 + 10 + 1 = 40 + 1 = 41$$
 $20 + 10 + 7 = \underline{\hspace{0.5cm}} + \underline{\hspace{0.5cm}} = \underline{\hspace{0.5cm}}$
 $1 + 10 + 2 = \underline{\hspace{0.5cm}} + \underline{\hspace{0.5cm}} = \underline{\hspace{0.5cm}}$
 $40 + 10 + 9 = \underline{\hspace{0.5cm}} + \underline{\hspace{0.5cm}} = \underline{\hspace{0.5cm}}$
 $30 + 10 + 6 = \underline{\hspace{0.5cm}} + \underline{\hspace{0.5cm}} = \underline{\hspace{0.5cm}}$
 $20 + 10 = 5 = \underline{\hspace{0.5cm}} + \underline{\hspace{0.5cm}} = \underline{\hspace{0.5cm}}$

1.5.7 Assessment

Learning Outcome 1: The learner will be able to recognise, describe and represent numbers and their relationships, and to count, estimate, calculate and check with competence and confidence in solving problems.

Table 1.18

Assessment Standard 1.6: We know this when the learner solves money problems involving totals and change in rands and cents, including converting between rands and cents.

Assessment Standard 1.8: We know this when the learner can perform calculations, using appropriate symbols, to solve problems involving:

- 1.8.1 addition and subtraction of whole numbers with at least 3 digits;
- 1.8.2 multiplication of at least whole 2-digit by 1-digit numbers;
- 1.8.3 division of at least whole 2-digit by 1-digit numbers;

• estimation;

Assessment Standard 1.10: We know this when the learner uses the following techniques:

- 1.10.1 building up and breaking down numbers;
- 1.10.2 doubling and halving;
- 1.10.3 number-lines;
- 1.10.4 rounding off in tens.

Learning Outcome 2: The learner will be able to recognise, describe and represent patterns and relationships, as well as to solve problems using algebraic language and skills.

Assessment Standard 2.2: We know this when the learner copies and extends simple number sequences to at least 1 000.

1.6 Halving and doubling⁶

1.6.1 MATHEMATICS

1.6.2 Meet Bonny and Tommy

1.6.3 EDUCATOR SECTION

1.6.4 Memorandum

If you as educator do not want to do halving just after doubling, leave it for the moment and do it later. However, make very sure that the slower learners in particular understand and have mastered the process of doubling before you do halving. Only do halving of even numbers at first.

It is important for the learners to know that $10 \div 2$ can have 2 different meanings: division or grouping. Look at the following two problems:

Divide 10 apples between 2 children so that they receive the same amount.

 $10 \ 2 = 5$ Each receives 5 apples.

I have 10 apples and give 2 to each child. How many children were there?

10 , 2 = 5 There were 5 children.

The number sentence is the same, but the presentation differs.

1.6.5 LEANER SECTION

1.6.6 Content

1.6.6.1 ACTIVITY: Halving and doubling [LO 1.10, LO 1.9, LO 1.8, LO 1.7]

• In tens:	Yesterday	${\bf Bonny}$	had 5	sums	correct.	Today	she d	doubled	$_{\mathrm{that}}$	${\rm number.}$	Now	she has
					corr	ect.						
Double means:	Add just a	ıs many										

You must add the same number twice (2x). Double 5: _____ (Think like this: 5+5) That is 2×5 .

• Now Tommy wants to double all his numbers. Help him! I want to see the way you think!

18 ÷ 2	=	 <u> </u>	2	=	

Figure 1.41

 \bullet \div 2 can also mean that you must divide 10 into groups of 2. Then you must calculate how many groups there are.

Figure 1.42

• I see 10 wheels. How many bicycles are there?

There are ______ bicycles. Number sentence: $10 \div 2 = 5$

• Tommy sees 12 ears above the bush. How many rabbits are there? Draw the 12 ears and group them into 2's.

Now you can count how many rabbits are hiding behind the bush. $12 \div 2 =$ _____ There are _____ rabbits.

LO 1.7

Table 1.24

1.6.7 Assessment

Learning Outcome 1: The learner will be able to recognise, describe and represent numbers and their relationships, and to count, estimate, calculate and check with competence and confidence in solving problems.

Assessment Standard 1.7: We know this when the learner solves and explains solutions to practical problems that involve equal sharing and grouping and that lead to solutions that also include unitary and nonunitary fractions (e.g. $1\frac{1}{4}1$, $\frac{3}{4}4$);

Assessment Standard 1.8: We know this when the learner can perform calculations, using appropriate symbols, to solve problems involving:

- 1.8.1 addition and subtraction of whole numbers with at least 3 digits;
- 1.8.2 multiplication of at least whole 2-digit by 1-digit numbers;
- 1.8.3 division of at least whole 2-digit by 1-digit numbers;
- estimation;

Assessment Standard 1.9: We know this when the learner performs mental calculations involving:

- 1.9.1 addition and subtraction for numbers to at least 50;
- 1.9.2 multiplication of whole numbers with solutions to at least 50;

Assessment Standard 1.10: We know this when the learner uses the following techniques:

- 1.10.1 building up and breaking down numbers;
- 1.10.2 doubling and halving;
- 1.10.3 number-lines;
- 1.10.4 rounding off in tens.

1.7 Counting in tens⁷

1.7.1 MATHEMATICS

1.7.2 Meet Bonny and Tommy

1.7.3 EDUCATOR SECTION

1.7.4 Memorandum

Count in tens regularly, forwards and backwards, from any number.

E.g. 4 14 24 34 44 54 64 74 84 94

97 87 77 67 57 47 37 27 17 7

The learners should be aware of how important the number 10 is in our number system (decimal system).

They should know the combinations of 10 very well and must be tested regularly. Much practice is required.

I estimate		
 Now group the counters on the desk in ten Count them and write: I have How was your estimate: too many, too few 		
Write: I estimatedBy how many were you out?		
• Is your number closer to 40, closer to 50 or	r equally far away from both?	
Write: My number is		
• How can you make your number equal to 5	50?	
Write: I can add	+	= 50
 If you have added 5 or less than 5, 50 is you How can you make your number equal to 4 	<u> </u>	
Write: I can subtract	:	=40

LO 1.8

Table 1.32

• If you subtracted 4 or less than 4, then 40 is your nearest multiple of ten.

 $^{^8} This \ content$ is available online at $<\! http://cnx.org/content/m22716/1.1/>.$

To round off a number to the nearest ten you must know which multiple of ten is closer to the number. If your number is the same distance from two multiples of ten, we use the greater multiple of ten.

• Look at the numbers and make an * next to the nearer multiple of ten.

43	40	50
49	40	50
46	40	50
41	40	50

Table 1.33

LO 1.10

Table 1.34

• Now help Bonny and Tommy to find the nearer multiple of ten.

Remember: If the units are 5 or more than 5, we use the greater multiple.

• If the units are 4 or less than 4, we use the smaller multiple.

24: nearer multiple is 20 16: nearer multiple is 20

37: nearer multiple is ______ 52: nearer multiple is ______ 73: nearer multiple is ______ 81: nearer multiple is ______ 94: nearer multiple is ______

• Round off to the nearer 10. (This will help you to estimate):

Rounding off:

Bonny has 69 sweets.

Tommy eats 8.

69 - 8 = 6l

She has 61 left.

Rounding off:

Bonny has 70 sweets.

Tommy eats 10.

70 - 10 = 60

She has 60 left.

Figure 1.50

If we round off, it helps us to estimate what the answer should be more quickly.

Remember! This is not an accurate answer!

- Use rounding off and estimate first. Then do an accurate calculation. Write the rounded off number above the number.
- Tommy has 84c in his purse and buys a banana for 69c.

How much money does he have left?

Rounding off: Number sentence:

1.9 Number name⁹

1.9.1 MATHEMATICS

1.9.2 Bonny and Tommy take a look at the seasons

1.9.3 EDUCATOR SECTION

1.9.4 Memorandum

This module still consists mostly of activities for consolidation, reinforcement and assessment of the work taught in the previous grades focusing on the number 100.

- Number concept to 200.
- Operations: Consolidates all work covered in Grade 1 en 2.

The names of the months and the correct spelling thereof need to be attended to. Discussions about the seasons and a healthy environment (nature conservation) will provide opportunities for the integration with other learning areas.

Weather charts for the different seasons can be recorded e.g. February – summer; May – autumn; August – winter; November – spring. These are not the best months for the seasons but they are the months in which the learners attend school for the whole month. Complete a bar graph for every weather chart so that weather conditions can be compared and discussed. Having completed all the bar graphs these can be compared to one another and the learners can discover weather conditions relevant to their own regions as well as those relevant to each season. The educator can keep the graphs to compare the statistics with the next year's graphs.

The tasks and activities in Learning Unit 2 are still mainly intended for consolidation of work covered in previous grades. It is essential, however, that educators continue to make use of concrete apparatus to repeat, explain and consolidate all concepts that were not fully mastered before.

It is of the utmost importance that learners must be totally familiar with the tens grouping of our numbers system:

- 10 ones are grouped as 1 group of ten
- 10 tens are grouped as 1 group of a hundred
- 10 groups of a hundred are grouped as 1 group of a thousand, etc.

⁹This content is available online at http://cnx.org/content/m32019/1.1/>.

Learners must work with counters that have been grouped in **hundreds**, **tens** and **units**. Should counters not be available, the following semi-concrete apparatus can be used.

Learners must work with counters that have been grouped in **hundreds**, **tens** and **units**. Should counters not be available, the following semi-concrete apparatus can be used.

Figure 1.57

The expansion cards (flared cards) are very useful in explaining place values, renaming, unifying of numbers and the 0 as place-keeper.

Attached you will find an example of expansion cards (flared cards) and a key to writing all number names. Flared cards enable learners to build any number, and if learners know the basic number names, they can construct and write any number name from the given parts. Give each learner a copy to use, for example

Example:

Number name: one thousand one hundred and thirty seven

Number:										
	Ι	2	3	4	5	6	7	8	9	
	1 0		2 0	3 0		40		5 ()	
	6 0)	7 0		8 0)	9 0)

Table 1.38

Frontpage.

It is essential to have an initial discussion on the changing of the seasons. Some learners may find it very stimulating to discover what causes seasons and why there are different seasons in the year.

Learners must complete the pictures by adding their own drawings to illustrate the typical seasonal qualities, e.g.:

Spring: flowers and blossoms; 2. Summer: anything to do with the seaside or the swimming pool; 3. Autumn: leaves in autumn colours on trees and the ground; 4. Winter: snow on the mountains or rain (where applicable), and leafless trees. Discuss it with the learners.

Learners are now expected to know the names of the seasons in the correct order, and to write them down. A "year and seasons clock" can be put up in the classroom, which can help the learners to master writing the names.

Explain the origin of the extra day every 4 years to the learners. Some of the learners may understand it at this stage, but it cannot be expected of them at all.

This work sheet may elicit a discussion on the Olympic games.

It is important that the learners must understand that if 1 is added to the 9 units of 99, there is another group of ten. There are now 10 groups of ten altogether, which are grouped together to make 1 group of a hundred.

Likewise, they must understand that if they want to take away units from a hundred, they first have to dissolve the group of one hundred, and then dissolve 1 group of ten, before they will have units to take away.

The 0 as place-keeper might cause problems for some learners, Therefore it is essential that the learners must use counters that are grouped in hundreds, tens and units (or the copied blocks), as well as the flared cards, when this work is being done. If necessary, provide similar activities.

If the learners find it difficult to master place values, lay out the numbers with the flared cards.

On the next page there is an example of the multiples chart. It can be utilised very effectively, therefore it is suggested that each learner is given a copy.

This example has been done further than the one on the work sheet, but it can be used for the whole year. Besides, there are learners who are able and keen to count in 6,7,8 and 9.

Show the learners how to find the answers to the tables, x and + from the chart.

Example: 2 x 4 = 8 Go right from 2 and above from 4 downwards – meet at 8 (see arrows)

 $15 \div 3 = 5$ Go left from 15 to 3 and up from 15 - 5th multiple

Multiples: Count up to the 10 th multiple and back.

Figure 1.59

At this stage the learners must know that 100c = R1. The learners now have a good concept of 100 and will realise that 120c equal R1 plus 20c, thus they can now learn to write it correctly, namely 120c = R1,20. Master it up to 199c = R1,99.

Once they have mastered it, do the reverse: R1,20 = 120c up to R1,99 = 199c.

It is imperative that the learners understand the **completion** and **solution of a ten** completely. This is an investment for the future. The more **concrete work** that is done here, the better the learners' understanding of these concepts. They must be able to **relate** what they are doing. If they cannot **say** how they arrived at an answer, it means that the concrete image has not been properly consolidated. Give them **many** and **regular exercises** of this kind.

Remember, if you prefer not to do solution directly after the completion, you are free to alter the sequence of the work sheets to suit yourself.

- (i) Various triangles: the isosceles; equilateral and rectangular and any other types of triangle.
- (ii) Various rectangles and squares.

(iii) Protractors and rulers, enough for everyone in the group.

First establish what the learners already know about the **sides** and **angles** of triangles, rectangles and squares.

Measuring angles:

Explain what a **right angle** is (angle equal to 90°) if they do not know it. Show the learners the **protractor** and how to measure an angle with it. Make sure that they know exactly how to measure angles.

Let them measure the angles of the various forms on the mat. They must say what they have discovered about the **angles** of the triangles, rectangles and squares.

All the angles of the rectangles and the squares are **right angles**. Give them the opportunity to discover other **right angles** in the classroom.

Have they discovered that a triangle never has more than one right angle? A triangle with a right angle is called a **rectangular triangle**.

Measuring sides:

Give the learners rulers to measure the sides. Make very sure that all the learners know how to measure using a ruler.

They must discover their own:

There are triangles of which the 3 sides are of the same length. That is an equilateral triangle.

There are triangles of which 2 sides are the same length. That is an isosceles triangle.

There are triangles of which the sides are all different.

The 4 sides of a square are of equal length.

The 2 opposite sides of a rectangle are the same length.

This work will probably not all be done in one mat session, and the time needed will vary depending on the group involved. It is advisable to complete measuring angles in one session and measuring sides in another.

If the learners have already mastered halving of unequal numbers, it is only necessary to explain how to write $\frac{1}{2}$ That means 1 of the 2 parts into which it has been divided:

1	is numerator
2	is denominator

Table 1.39

This is about halving 3,5,7 or 9 groups of ten. There is always 1 ten that must be solved. Encourage the learners to regroup before they halve. They must first do it concretely on the mat.

Figure 1.60

Figure 1.61

Every time the numbers 6 to 9 are doubled, a ten is completed.

The learners must indicate it on the work sheet by drawing a circle around the ten.

Figure 1.62

If there is no calculator available, the educator or one of the learners can write the answers on the blackboard after completing the work sheet. However, the learners who are able to do the calculations on their own, must be allowed to do it.

Encourage the learners to persevere until they find the right "path". They may require an extra sheet of paper on which to write the numbers while trying to find the correct ones.7

1.9.5 LEANER SECTION

1.9.6 Content

1.9.6.1 ACTIVITY: Number name [LO 1.1, LO 1.3, LO 1.10, LO 4.2, LO 5.4]

Here is Bonny and Tommy's "year and season clock". It is called a clock, because it goes around and around like other clocks.

Figure 1.63

- Use their "clock" and complete the sentences:
 There are ______ seasons in a year.
 _____ and ____ are the main seasons.
 _____ and ____ are the transitional seasons.
 Make an * (on the clock) next to the season and the month in which we are now.
 Which season do you like best?
 Why? _____
 There are _____ months in a year.
 There are _____ months in each season.
- Bonny and Tommy have made a graph

Figure 1.64

• Count the number of days in each month and write it next to the graph.

Complete:		
1.	is the shortest month. It has	days.
	v, July, August, October en Decembers have	
3.	,,	,
	and	
4.	is the first and	
is the last month of the y	ear.	
5.	comes just after September.	
comes just before April.		
An ordinary year has 30	65 days, but a leap year has 366 days.	
Find out:		
• To which month is th	e extra day added?	
• When is the next leap	year?	
 Which world famous s 	sporting event, where competitors participate in mar	ny different sports, takes place
every leap year?		

Bonny and Tommy know the numbers and number names up to ninety nine. Now we can go further! Hundreds Units Tens 0 0 10 groups of ten are one hundred 99 + 1 = 100 © Draw a circle around the tens and complete the last ten as well. Then draw a circle around the ten groups of ten to make one group of hundred. 100 + 80 = _____
```

•	Write	down	the	above	$\operatorname{numbers}$	and	$_{ m their}$	number	names:

• Which number comes 4 places after?

104: ____ 1 16: ____ 140: ___ 169: ____

• Which number comes 3 places after?

109: ____ 1 13: ____ 160: ___ 191: ____

• Who wants to take a chance? 125 + 143 = _____

Bonny is looking for all the balloons with the uneven numbers. The balloons with the even numbers belong to Tommy. Lengthen the strings of the balloons so that each one holds the correct balloons.

Figure 1.67

• Arrange the numbers on **Bonny's** balloons from the **most** to the **least**:

____ ___

• Arrange the numbers on **Tommy's** balloons from the **least** to the **most**:

• Fill in =, < or >:

145	 154	100	+	3	 100	+	1
101	 110	70	+	30	 106	-	6
199	 195	120	-	20	 100	+	20
139	 141	100	+	5	 100	+	50
114	 111	100	+	9	 100	+	8

Table 1.40

• What is the **place value** of the **underlined digit** in each number?

```
108 The place value of the 1 is _____.

143 The place value of the 4 is _____.

17 1 The place value of the 1 is _____.
```

1.9.7 Assessment

Learning Outcome 1: The learner will be able to recognise, describe and represent numbers and their relationships, and to count, estimate, calculate and check with competence and confidence in solving problems.

Assessment Standard 1.1: We know this when the learner counts forwards and backwards in:

1.1.1 the intervals specified in grade 2 with increased number ranges;

Assessment Standard 1.3: We know this when the learner knows, reads and writes number symbols and names from 1 to at least 1 000;

Assessment Standard 1.10: We know this when the learner uses the following techniques:

- 1.10.1 building up and breaking down numbers;
- 1.10.2 doubling and halving;
- 1.10.3 number-lines;
- 1.10.4 rounding off in tens.

Learning Outcome 4: The learner will be able to use appropriate measuring units, instruments and formulae in a variety of contexts.

Assessment Standard 4.2: We know this when the learner solves problems involving calculations with and conversions;

Learning Outcome 5: The learner will be able to collect, summarise, display and critically analyse data in order to draw conclusions and make predictions, and to interpret and determine chance variation.

Assessment Standard 5.4: We know this when the learner reads, interprets and reports on information in own and a peer's representations of data.

1.10 Multiples¹⁰

1.10.1 MATHEMATICS

1.10.2 Bonny and Tommy take a look at the seasons

1.10.3 EDUCATOR SECTION

1.10.4 Memorandum

This module still consists mostly of activities for consolidation, reinforcement and assessment of the work taught in the previous grades focusing on the number 100.

- Number concept to 200.
- Operations: Consolidates all work covered in Grade 1 en 2.

The names of the months and the correct spelling thereof need to be attended to. Discussions about the seasons and a healthy environment (nature conservation) will provide opportunities for the integration with other learning areas.

Weather charts for the different seasons can be recorded e.g. February – summer; May – autumn; August – winter; November – spring. These are not the best months for the seasons but they are the months in which the learners attend school for the whole month. Complete a bar graph for every weather chart so that weather conditions can be compared and discussed. Having completed all the bar graphs these can be compared to one another and the learners can discover weather conditions relevant to their own regions as well as those relevant to each season. The educator can keep the graphs to compare the statistics with the next year's graphs.

The tasks and activities in Learning Unit 2 are still mainly intended for consolidation of work covered in previous grades. It is essential, however, that educators continue to make use of concrete apparatus to repeat, explain and consolidate all concepts that were not fully mastered before.

It is of the utmost importance that learners must be totally familiar with the tens grouping of our numbers system:

- 10 ones are grouped as 1 group of ten
- 10 tens are grouped as 1 group of a hundred
- 10 groups of a hundred are grouped as 1 group of a thousand, etc.

Learners must work with counters that have been grouped in **hundreds**, **tens** and **units**. Should counters not be available, the following semi-concrete apparatus can be used.

Learners must work with counters that have been grouped in **hundreds**, **tens** and **units**. Should counters not be available, the following semi-concrete apparatus can be used.

¹⁰This content is available online at http://cnx.org/content/m32020/1.1/>.

The expansion cards (flared cards) are very useful in explaining place values, renaming, unifying of numbers and the 0 as place-keeper.

Attached you will find an example of expansion cards (flared cards) and a key to writing all number names. Flared cards enable learners to build any number, and if learners know the basic number names, they can construct and write any number name from the given parts. Give each learner a copy to use, for example

Example:

Number name: one thousand one hundred and thirty seven

Number:	lumber:								
I	2	3	4	5	6	7	8	9	
1 0		2 0	3 0		40		5 0)	
6 0)	7 0		8 0)	9 0)		
1 0	0		2 0 0			3 (0 0		- 2
40	0 (5 0 0			6 (0 0		
7 0	0		800			9 (0 0		
1 0	0 0)		2000					
4000			5000						
6 0	6000			7000					
8 0	0 ()		9000					

Figure 1.69

Table 1.41

Frontpage.

It is essential to have an initial discussion on the changing of the seasons. Some learners may find it very stimulating to discover what causes seasons and why there are different seasons in the year.

Learners must complete the pictures by adding their own drawings to illustrate the typical seasonal qualities, e.g.:

Spring: flowers and blossoms; 2. Summer: anything to do with the seaside or the swimming pool; 3. Autumn: leaves in autumn colours on trees and the ground; 4. Winter: snow on the mountains or rain (where applicable), and leafless trees. Discuss it with the learners.

Learners are now expected to know the names of the seasons in the correct order, and to write them down. A "year and seasons clock" can be put up in the classroom, which can help the learners to master writing the names.

Explain the origin of the extra day every 4 years to the learners. Some of the learners may understand it at this stage, but it cannot be expected of them at all.

This work sheet may elicit a discussion on the Olympic games.

It is important that the learners must understand that if 1 is added to the 9 units of 99, there is another group of ten. There are now 10 groups of ten altogether, which are grouped together to make 1 group of a hundred.

Likewise, they must understand that if they want to take away units from a hundred, they first have to dissolve the group of one hundred, and then dissolve 1 group of ten, before they will have units to take away.

The 0 as place-keeper might cause problems for some learners, Therefore it is essential that the learners must use counters that are grouped in hundreds, tens and units (or the copied blocks), as well as the flared cards, when this work is being done. If necessary, provide similar activities.

If the learners find it difficult to master place values, lay out the numbers with the flared cards.

On the next page there is an example of the multiples chart. It can be utilised very effectively, therefore it is suggested that each learner is given a copy.

This example has been done further than the one on the work sheet, but it can be used for the whole year. Besides, there are learners who are able and keen to count in 6,7,8 and 9.

Show the learners how to find the answers to the tables, x and + from the chart.

Example: 2 x 4 = 8 Go right from 2 and above from 4 downwards – meet at 8 (see arrows)

 $15 \div 3 = 5$ Go left from 15 to 3 and up from 15 - $5^{\rm th}$ multiple

Multiples: Count up to the 10 th multiple and back.

Count in:	2	2	4	6	₹	l ib	12	14	16	18	20
	3	₹ 3	6	9	12	(5)	18	21	24	27	30
-		10.1									
Count up	to the	e IUth	multi	ple an	d back	< .					
Count in:		(1)	2	3	4	(5)	6	7	8	9	(10)
	2	2	4	6	8	10	12	14	16	18	20
	3	3	6	9	12	15	18	21	24	27	30
	4	4	8	12	16	20	24	28	32	36	40
	5	5	10	15	20	25	30	35	40	45	50
	6	6	12	18	24	30	36	42	48	54	60
	7	7	14	21	28	35	42	49	56	63	70
	8	8	16	24	32	40	48	56	64	72	80
	9	9	18	27	36	45	54	63	72	81	90
	10	10	20	30	40	50	60	70	80	90	100

Figure 1.70

At this stage the learners must know that 100c = R1. The learners now have a good concept of 100 and will realise that 120c equal R1 plus 20c, thus they can now learn to write it correctly, namely 120c = R1,20. Master it up to 199c = R1,99.

Once they have mastered it, do the reverse: R1,20 = 120c up to R1,99 = 199c.

It is imperative that the learners understand the **completion** and **solution of a ten** completely. This is an investment for the future. The more **concrete work** that is done here, the better the learners' understanding of these concepts. They must be able to **relate** what they are doing. If they cannot **say** how they arrived at an answer, it means that the concrete image has not been properly consolidated. Give them **many** and **regular exercises** of this kind.

Remember, if you prefer not to do solution directly after the completion, you are free to alter the sequence of the work sheets to suit yourself.

- (i) Various triangles: the isosceles; equilateral and rectangular and any other types of triangle.
- (ii) Various rectangles and squares.

(iii) Protractors and rulers, enough for everyone in the group.

First establish what the learners already know about the **sides** and **angles** of triangles, rectangles and squares.

Measuring angles:

Explain what a **right angle** is (angle equal to 90°) if they do not know it. Show the learners the **protractor** and how to measure an angle with it. Make sure that they know exactly how to measure angles.

Let them measure the angles of the various forms on the mat. They must say what they have discovered about the **angles** of the triangles, rectangles and squares.

All the angles of the rectangles and the squares are **right angles**. Give them the opportunity to discover other **right angles** in the classroom.

Have they discovered that a triangle never has more than one right angle? A triangle with a right angle is called a **rectangular triangle**.

Measuring sides:

Give the learners rulers to measure the sides. Make very sure that all the learners know how to measure using a ruler.

They must discover their own:

There are triangles of which the 3 sides are of the same length. That is an equilateral triangle.

There are triangles of which 2 sides are the same length. That is an isosceles triangle.

There are triangles of which the sides are all different.

The 4 sides of a square are of equal length.

The 2 opposite sides of a rectangle are the same length.

This work will probably not all be done in one mat session, and the time needed will vary depending on the group involved. It is advisable to complete measuring angles in one session and measuring sides in another.

If the learners have already mastered halving of unequal numbers, it is only necessary to explain how to write $\frac{1}{2}$ That means 1 of the 2 parts into which it has been divided:

1	is numerator
2	is denominator

Table 1.42

This is about halving 3,5,7 or 9 groups of ten. There is always 1 ten that must be solved. Encourage the learners to regroup before they halve. They must first do it concretely on the mat.

Figure 1.71

Figure 1.72

Every time the numbers 6 to 9 are doubled, a ten is completed.

The learners must indicate it on the work sheet by drawing a circle around the ten.

Figure 1.73

If there is no calculator available, the educator or one of the learners can write the answers on the blackboard after completing the work sheet. However, the learners who are able to do the calculations on their own, must be allowed to do it.

Encourage the learners to persevere until they find the right "path". They may require an extra sheet of paper on which to write the numbers while trying to find the correct ones.7

This work sheet may elicit a discussion on the Olympic games.

It is important that the learners must understand that if 1 is added to the 9 units of 99, there is another group of ten. There are now 10 groups of ten altogether, which are grouped together to make 1 group of a hundred.

Likewise, they must understand that if they want to take away units from a hundred, they first have to dissolve the group of one hundred, and then dissolve 1 group of ten, before they will have units to take away.

The 0 as place-keeper might cause problems for some learners, Therefore it is essential that the learners must use counters that are grouped in hundreds, tens and units (or the copied blocks), as well as the flared cards, when this work is being done. If necessary, provide similar activities.

If the learners find it difficult to master place values, lay out the numbers with the flared cards.

On the next page there is an example of the multiples chart. It can be utilised very effectively, therefore it is suggested that each learner is given a copy.

This example has been done further than the one on the work sheet, but it can be used for the whole year. Besides, there are learners who are able and keen to count in 6,7,8 and 9.

Show the learners how to find the answers to the tables, x and + from the chart.

Example: 2 x 4 = 8 Go right from 2 and above from 4 downwards – meet at 8 (see arrows)

 $15 \div 3 = 5$ Go left from 15 to 3 and up from 15 - 5th multiple

Multiples: Count up to the 10 th multiple and back.

Figure 1.84

At this stage the learners must know that 100c = R1. The learners now have a good concept of 100 and will realise that 120c equal R1 plus 20c, thus they can now learn to write it correctly, namely 120c = R1,20. Master it up to 199c = R1,99.

Once they have mastered it, do the reverse: R1,20 = 120c up to R1,99 = 199c.

It is imperative that the learners understand the **completion** and **solution of a ten** completely. This is an investment for the future. The more **concrete work** that is done here, the better the learners' understanding of these concepts. They must be able to **relate** what they are doing. If they cannot **say** how they arrived at an answer, it means that the concrete image has not been properly consolidated. Give them **many** and **regular exercises** of this kind.

Remember, if you prefer not to do solution directly after the completion, you are free to alter the sequence of the work sheets to suit yourself.

- (i) Various triangles: the isosceles; equilateral and rectangular and any other types of triangle.
- (ii) Various rectangles and squares.

(iii) Protractors and rulers, enough for everyone in the group.

First establish what the learners already know about the **sides** and **angles** of triangles, rectangles and squares.

Measuring angles:

Explain what a **right angle** is (angle equal to 90°) if they do not know it. Show the learners the **protractor** and how to measure an angle with it. Make sure that they know exactly how to measure angles.

Let them measure the angles of the various forms on the mat. They must say what they have discovered about the **angles** of the triangles, rectangles and squares.

All the angles of the rectangles and the squares are **right angles**. Give them the opportunity to discover other **right angles** in the classroom.

Have they discovered that a triangle never has more than one right angle? A triangle with a right angle is called a **rectangular triangle**.

Measuring sides:

Give the learners rulers to measure the sides. Make very sure that all the learners know how to measure using a ruler.

They must discover their own:

There are triangles of which the 3 sides are of the same length. That is an equilateral triangle.

There are triangles of which 2 sides are the same length. That is an isosceles triangle.

There are triangles of which the sides are all different.

The 4 sides of a square are of equal length.

The 2 opposite sides of a rectangle are the same length.

This work will probably not all be done in one mat session, and the time needed will vary depending on the group involved. It is advisable to complete measuring angles in one session and measuring sides in another.

If the learners have already mastered halving of unequal numbers, it is only necessary to explain how to write $\frac{1}{2}$ That means 1 of the 2 parts into which it has been divided:

1	is numerator
2	is denominator

Table 1.47

This is about halving 3,5,7 or 9 groups of ten. There is always 1 ten that must be solved. Encourage the learners to regroup before they halve. They must first do it concretely on the mat.

Figure 1.85

Figure 1.86

Every time the numbers 6 to 9 are doubled, a ten is completed.

The learners must indicate it on the work sheet by drawing a circle around the ten.

Figure 1.87

If there is no calculator available, the educator or one of the learners can write the answers on the blackboard after completing the work sheet. However, the learners who are able to do the calculations on their own, must be allowed to do it.

Encourage the learners to persevere until they find the right "path". They may require an extra sheet of paper on which to write the numbers while trying to find the correct ones.7

1.11.6 Content

1.11.6.1 AACTIVITY: Grouping [LO 1.4, LO 1.7, LO 1.8, LO 1.9, LO 1.10, LO 3.1, LO 3.3]

Bonny and Tommy know how easy it is to work with numbers once they have been grouped into tens. Sometimes it is necessary to **regroup** some of **the tens** if one has to **subtract** and there are not enough units to take away.

Mary has 16 sweets and she wants to give Peter 9. How many will she have left?

Number sentence:
$$16 - 9 =$$

 $00000/0$

Bonny did it this way:
 $16 - 9 = (10 - 9) + 6$
 $= 1 + 6$
 $= 7$

She **regrouped the 10** and took away the 9 from the 10. The 1 that was left from the 10, was then added to the 6 of the 16. Then 10 were left.

First of all he took away the 6 units from the 16. Then there were 10 left. He then **regrouped the 10** so that he could take away the 3 that he needed to take away. Then 7 were left.

 You can decide for yourself what you want to do if you have to regroup a ten.

Figure 1.88

Mary has 16 sweets and she wants to give Peter 9. How many will she have left?

Tommy says we must do it without the dots now.

• Do the one that you understand **best**.

• Complete:

Figure 1.89

• Think!

9 + 6 6 + 7 8 + 6 5 + 8 7 + 7 3 + 9 4 + 7	=	7 + 5 = 9 + 4 = 6 + 5 = 8 + 3 = 4 + 8 = 5 + 5 = 9 + 9 =		8 + 7 + 9 + 6 + 5 + 2 + 4 +	8 = 3 = 7 = 6 = 9 = 6 =

TodayBonny and Tommygot only half an apple each. Their mother had only 1 apple, but she divided it very carefully so that both parts were exactly the same size. She halved it.

Figure 1.94

• We say: Bonny got one half, and Tommy got the other half.

There were ______

• Who wants to try this? (You may draw if you like.)

1.11.7 Assessment

Learning Outcome 1: The learner will be able to recognise, describe and represent numbers and their relationships, and to count, estimate, calculate and check with competence and confidence in solving problems.

Assessment Standard 1.1: We know this when the learner counts forwards and backwards in:

1.1.1 the intervals specified in grade 2 with increased number ranges;

Assessment Standard 1.6: We know this when the learner solves money problems involving totals and change in rands and cents, including converting between rands and cents;

Assessment Standard 1.8: We know this when the learner can perform calculations, using appropriate symbols, to solve problems

Assessment Standard 1.9: We know this when the learner performs mental calculations;

Assessment Standard 1.10: We know this when the learner uses the following techniques:

- 1.10.1 building up and breaking down numbers;
- 1.10.2 doubling and halving;
- 1.10.3 number-lines;
- 1.10.4 rounding off in tens

Learning Outcome 3: The learner will be able to describe and represent characteristics and relationships between two-dimensional shapes and three-dimensional objects in a variety of orientations and positions.

Assessment Standard 3.1: We know this when the learner recognises, identifies and names two-dimensional shapes and three-dimensional objects in the environment and in pictures;

Assessment Standard 3.3: We know this when the learner observes and creates given and described two-dimensional shapes and three-dimensional objects using concrete materials (e.g. building blocks, construction sets, cut-out two-dimensional shapes, clay, drinking straws).

1.12.1 MATHEMATICS

1.12.2 Bonny and Tommy take a look at the seasons

1.12.3 EDUCATOR SECTION

1.12.4 Memorandum

This module still consists mostly of activities for consolidation, reinforcement and assessment of the work taught in the previous grades focusing on the number 100.

- Number concept to 200.
- Operations: Consolidates all work covered in Grade 1 en 2.

 $^{^{12}}$ This content is available online at <http://cnx.org/content/m32022/1.1/>.

The names of the months and the correct spelling thereof need to be attended to. Discussions about the seasons and a healthy environment (nature conservation) will provide opportunities for the integration with other learning areas.

Weather charts for the different seasons can be recorded e.g. February – summer; May – autumn; August – winter; November – spring. These are not the best months for the seasons but they are the months in which the learners attend school for the whole month. Complete a bar graph for every weather chart so that weather conditions can be compared and discussed. Having completed all the bar graphs these can be compared to one another and the learners can discover weather conditions relevant to their own regions as well as those relevant to each season. The educator can keep the graphs to compare the statistics with the next year's graphs.

The tasks and activities in Learning Unit 2 are still mainly intended for consolidation of work covered in previous grades. It is essential, however, that educators continue to make use of concrete apparatus to repeat, explain and consolidate all concepts that were not fully mastered before.

It is of the utmost importance that learners must be totally familiar with the tens grouping of our numbers system:

- 10 ones are grouped as 1 group of ten
- 10 tens are grouped as 1 group of a hundred
- 10 groups of a hundred are grouped as 1 group of a thousand, etc.

Learners must work with counters that have been grouped in **hundreds**, **tens** and **units**. Should counters not be available, the following semi-concrete apparatus can be used.

Learners must work with counters that have been grouped in **hundreds**, **tens** and **units**. Should counters not be available, the following semi-concrete apparatus can be used.

Figure 1.96

The expansion cards (flared cards) are very useful in explaining place values, renaming, unifying of numbers and the 0 as place-keeper.

Attached you will find an example of expansion cards (flared cards) and a key to writing all number names. Flared cards enable learners to build any number, and if learners know the basic number names, they can construct and write any number name from the given parts. Give each learner a copy to use, for example

Example:

Number name: one thousand one hundred and thirty seven

No	umber:	l 137				1000	IC	00	30	7
	Ι	2	3	4	5	6	7	8	9

Table 1.48

Frontpage.

It is essential to have an initial discussion on the changing of the seasons. Some learners may find it very stimulating to discover what causes seasons and why there are different seasons in the year.

Learners must complete the pictures by adding their own drawings to illustrate the typical seasonal qualities, e.g.:

Spring: flowers and blossoms; 2. Summer: anything to do with the seaside or the swimming pool; 3. Autumn: leaves in autumn colours on trees and the ground; 4. Winter: snow on the mountains or rain (where applicable), and leafless trees. Discuss it with the learners.

Learners are now expected to know the names of the seasons in the correct order, and to write them down. A "year and seasons clock" can be put up in the classroom, which can help the learners to master writing the names.

Explain the origin of the extra day every 4 years to the learners. Some of the learners may understand it at this stage, but it cannot be expected of them at all.

This work sheet may elicit a discussion on the Olympic games.

It is important that the learners must understand that if 1 is added to the 9 units of 99, there is another group of ten. There are now 10 groups of ten altogether, which are grouped together to make 1 group of a hundred.

Likewise, they must understand that if they want to take away units from a hundred, they first have to dissolve the group of one hundred, and then dissolve 1 group of ten, before they will have units to take away.

The 0 as place-keeper might cause problems for some learners, Therefore it is essential that the learners must use counters that are grouped in hundreds, tens and units (or the copied blocks), as well as the flared cards, when this work is being done. If necessary, provide similar activities.

If the learners find it difficult to master place values, lay out the numbers with the flared cards.

On the next page there is an example of the multiples chart. It can be utilised very effectively, therefore it is suggested that each learner is given a copy.

This example has been done further than the one on the work sheet, but it can be used for the whole year. Besides, there are learners who are able and keen to count in 6,7,8 and 9.

7

9

10

Show the learners how to find the answers to the tables, x and + from the chart.

Example: 2 x 4 = 8 Go right from 2 and above from 4 downwards – meet at 8 (see arrows)

 $15 \div 3 = 5$ Go left from 15 to 3 and up from 15 - 5th multiple

Multiples: Count up to the 10 th multiple and back.

Figure 1.98

At this stage the learners must know that 100c = R1. The learners now have a good concept of 100 and will realise that 120c equal R1 plus 20c, thus they can now learn to write it correctly, namely 120c = R1,20. Master it up to 199c = R1,99.

Once they have mastered it, do the reverse: R1,20 = 120c up to R1,99 = 199c.

It is imperative that the learners understand the **completion** and **solution of a ten** completely. This is an investment for the future. The more **concrete work** that is done here, the better the learners' understanding of these concepts. They must be able to **relate** what they are doing. If they cannot **say** how they arrived at an answer, it means that the concrete image has not been properly consolidated. Give them **many** and **regular exercises** of this kind.

Remember, if you prefer not to do solution directly after the completion, you are free to alter the sequence of the work sheets to suit yourself.

(i) Various triangles: the isosceles; equilateral and rectangular and any other types of triangle.

- (ii) Various rectangles and squares.
- (iii) Protractors and rulers, enough for everyone in the group.

First establish what the learners already know about the **sides** and **angles** of triangles, rectangles and squares.

Measuring angles:

Explain what a **right angle** is (angle equal to 90°) if they do not know it. Show the learners the **protractor** and how to measure an angle with it. Make sure that they know exactly how to measure angles.

Let them measure the angles of the various forms on the mat. They must say what they have discovered about the **angles** of the triangles, rectangles and squares.

All the angles of the rectangles and the squares are **right angles**. Give them the opportunity to discover other **right angles** in the classroom.

Have they discovered that a triangle never has more than one right angle? A triangle with a right angle is called a **rectangular triangle**.

Measuring sides:

Give the learners rulers to measure the sides. Make very sure that all the learners know how to measure using a ruler.

They must discover their own:

There are triangles of which the 3 sides are of the same length. That is an equilateral triangle.

There are triangles of which 2 sides are the same length. That is an isosceles triangle.

There are triangles of which the sides are all different.

The 4 sides of a square are of equal length.

The 2 opposite sides of a rectangle are the same length.

This work will probably not all be done in one mat session, and the time needed will vary depending on the group involved. It is advisable to complete measuring angles in one session and measuring sides in another.

If the learners have already mastered halving of unequal numbers, it is only necessary to explain how to write $\frac{1}{2}$ That means 1 of the 2 parts into which it has been divided:

1	is numerator
2	is denominator

Table 1.49

This is about halving 3,5,7 or 9 groups of ten. There is always 1 ten that must be solved. Encourage the learners to regroup before they halve. They must first do it concretely on the mat.

Figure 1.99

$$90 = 80 + 10$$
 $\begin{pmatrix} 20 & 40 \\ 5 & 5 \end{pmatrix}$ $40 + 5 = 45$

Figure 1.100

1.12.6 Content

1.12.6.1 ACTIVITY: Halving and Doubling [LO 1.8, LO 1.9, LO 1.10]

• Here are 30 smarties. Show me how you are going to divide them between **Bonny** and **Tommy**. Make **Bonny**'s smarties **red** and **Tommy**'sgreen.

Figure 1.102

Bonny and Tommy say they are going to try very hard to **double** their pocket money. That means that they will also have to do **double** the number of jobs.

• You will remember that **Bonny**earned **R2** and **Tommy R2,20**. Calculate how much each will get if it is doubled.

Bonny will get R____ and Tommy will get R____.

Figure 1.103

Bonny and Tommy know there is a $\underline{\text{treasure}}$ in the cottage across the river, but they do not know how to get there. Can you help them?

Here is a clue.

As you walk, add together the numbers on the stones. If you get **200** when you add the **8** on the stone directly in front of the cottage, you have found the right way. Be careful, because there are stones on which you must not step. **Now** draw the **route that you have taken on the picture**.

Figure 1.104

• Write down the value of all the stones that you have used to cross the river. Add them.

1.12.7 Assessment

Learning Outcome 1: The learner will be able to recognise, describe and represent numbers and their relationships, and to count, estimate, calculate and check with competence and confidence in solving problems.

Assessment Standard 1.8: We know this when the learner can perform calculations, using appropriate symbols, to solve problems

Assessment Standard 1.9: We know this when the learner performs mental calculations; Assessment Standard 1.10: We know this when the learner uses the following techniques:

- 1.10.1 building up and breaking down numbers;
- 1.10.2 doubling and halving;
- 1.10.3 number-lines;
- 1.10.4 rounding off in tens.

Chapter 2

Term 2

2.1 Numbers¹

2.1.1 MATHEMATICS

2.1.2 Bonny and Tommy's birthday party

2.1.3 EDUCATOR SECTION

2.1.4 Memorandum

- More advanced work is covered, but the educator will benefit greatly if pages (completing the calendar)
 are done with all the learners simultaneously. Groups 2 and 3 can then afterwards continue with the
 work with which they are busy.
- Number Concept to 400
- Operations:
- Addition two digit numbers with two digit numbers, using regrouping of a ten.
- Subtraction two digit numbers from two digit numbers, using regrouping of a ten.
- Multiplication -2x, 4x, 5x and 10x to the 10th multiple (tables).
- Division $\div 2$, $\div 4$, $\div 5$ and $\div 10$ to the 10th multiple (tables).

Integrate the design of the hat and the gift wrap with Technology. This can be done classically.

All the calculations involving money and other quantities which the learners work with will enable them to realise that Mathematics is part of our daily activities.

From Module 3 onwards the learners will gradually progress to the more advanced work of Grade 3. It may be necessary sometimes to go back to previous work to expedite the transition to the advanced work.

It is important that the learners should realise that addition and subtraction combinations as well as the tables, multiplication and division, simply have to be repeated regularly and must be learnt until they know it! It is basic work that cannot be neglected.

Attached you will find a sheet with tables presented in a specific order. You can copy it and give it to the learners so that they can keep it with them.

These worksheets can be presented to the whole class at the same time. Learners must write the dates on the calendar on their own, therefore it is of the utmost importance that you will make quite sure that all the learners begin on the correct day in January. I suggest that you fill in 1 January yourself before copying the worksheet. If you like, you could even fill it in further, depending on the competence of the learners.

It is important for the learners to understand the difference between days of the week (7) and workdays, school days or week days (5), otherwise they may make numerous errors in their calculations.

¹This content is available online at http://cnx.org/content/m32452/1.1/>.

The learners must be aware of the patterns that are used in completing tables, therefore they must identify the pattern initially before they try to complete the table.

This is a vertical numbers line. The negative numbers have been filled in so that the learner will realise that numbers smaller than 0 do exist. It is not necessary to give this aspect much attention at this stage. It can just be mentioned in passing, to satisfy the learners who are keen to know more.

Explain to the learners that they are seeing diagrams, and that each symbol represents the value of the place where it stands.

Regrouping the 10 is being done now. The learners must first lay it out on the mat, so that it is experienced as something concrete, and so that they can see that there are 12 units and that they can therefore make another ten. This ten is then grouped with the other tens.

It depends on the educator and the abilities of the learners whether they are going to use carried numbers when doing the vertical calculations

The breaking up of the ten is also learnt now. Learners must work with this on the mat in order to experience in concrete terms that there are not enough units and that a ten must be regrouped in order to get enough units. They must understand the breaking up (regrouping) of the ten very well before they can do it in writing.

Again it depends on the educator and the abilities of the learners whether they are going to make use of carried numbers in vertical calculations.

$ \begin{array}{cccccccccccccccccccccccccccccccccccc$	$124 \times 4 = 164 \times 5$ $= 204 \times 6 = 244 \times$ $7 = 284 \times 8 = 324$ $\times 9 = 364 \times 10 =$ 40	$38 \div 2 = 410 \div 2$ = $512 \div 2 = 614 \div$ $2 = 716 \div 2 = 818$ $\div 2 = 920 \div 2 =$ 10	$= 316 \div 4 = 420 \div 4 = 524 \div 4 = 628 \\ \div 4 = 732 \div 4 = \\ 836 \div 4 = 940 \div 4 \\ = 10$
$55 \times 2 = 105 \times 3 = 155 \times 4 = 205 \times 5 = 255 \times 6 = 305 \times 7 = 355 \times 8 = 405 \times 9 = 455 \times 10 = 50$	$\begin{array}{c} 10 \text{ x } 0 = 010 \text{ x } 1 \\ = 1010 \text{ x } 2 = 2010 \\ \text{x } 3 = 3010 \text{ x } 4 = \\ 4010 \text{ x } 5 = 5010 \\ \text{x } 6 = 6010 \text{ x } 7 = \\ 7010 \text{ x } 8 = 8010 \text{ x } \\ 9 = 9010 \text{ x } 10 = \\ 100 \end{array}$	$=320 \div 5 = 425 \div 5 = 530 \div 5 = 635$	$0 \div 10 = 010 \div 10$ $= 120 \div 10 = 230$ $\div 10 = 340 \div 10$ $= 450 \div 10 = 560$ $\div 10 = 670 \div 10 =$ $780 \div 10 = 890 \div$ $10 = 9100 \div 10 =$ 10

$3 \times 0 = 03 \times 1 =$	$6 \times 0 = 06 \times 1 =$	$0 \div 3 = 03 \div 3 =$	$0 \div 6 = 06 \div 6 =$
$33 \times 2 = 63 \times 3 =$	$66 \times 2 = 126 \times 3 =$	$16 \div 3 = 29 \div 3 =$	$112 \div 6 = 218 \div 6$
$93 \times 4 = 123 \times 5 =$	$186 \times 4 = 246 \times 5$	$312 \div 3 = 415 \div 3$	$=324 \div 6=430 \div$
$153 \times 6 = 183 \times 7$	$= 306 \times 6 = 366 \times$	$=518 \div 3=621 \div$	$6 = 536 \div 6 = 642$
$= 213 \times 8 = 243 \times 8 = 243 \times 10^{-6}$	$7 = 426 \times 8 = 486$	$3 = 724 \div 3 = 827$	$\div 6 = 748 \div 6 =$
$9 = 273 \times 10 = 30$	$x 9 = 546 \times 10 = 0$	$\div 3 = 930 \div 3 = 1$	$854 \div 6 = 960 \div 6$
	60	10	=10

Table 2.1

The important fact here is the equivalence of different coins. There are learners who will indicate 7c as 4c and 3c in coins, and who will not realise that such coins do not exist in our currency.

It is also the ideal opportunity for learners to learn 5x and \div if they have not yet done so.

Point out to the learners that in calculations the R and c are left out, but that they must be inserted in the completed number sentence (answers).

Encourage the learners to keep on drawing what they read and then to write the number sentence in order to solve the problem.

Make very sure that all the learners know that there will be 10 children at the party. (8 + Bonny + Tommy) If this information is incorrect, all the following calculations will be extremely difficult.

Designing and making the party hat can be done as part of Technology.

Demonstrate and discuss the 3 ways in which to draw a circle.

Do a great deal of practical work.

Make sure that they understand and know what the centre, diameter and radius of a circle is, and that 2x radius = diameter. Explain to the learners what the circumference of the circle is.

The learners must indicate all points with letters right from the beginning. Show them that it makes it much easier to discuss and explain various aspects of the construction. They must understand that they may use any letter, as long as the same letter is not used twice in the same construction.

Once more discuss the different ways in which to divide squares and rectangles into halves and quarters. Much concrete and semi-concrete work must be done when the learners have to divide numbers into quarters, especially when the number is not a multiple of 4. Use objects such as fruit and soft sweets that can actually be broken up quite easily, and not hard objects such as marbles, stones or bottle caps.

Explain to the learners that it will depend on the problem whether you can break it up into fractions or not.

Look at this: Daddy has 25 sheep that have to be herded into 4 pens. How many sheep will there be in each pen? (The remaining sheep cannot be cut up.)

Daddy has slaughtered 25 sheep and takes them to 4 butcheries. How many does each butchery get? (It will certainly be possible to divide the remaining sheep into 4.) Discuss more similar examples.

As soon as the learners understand that 4x is 2 times doubled, and $4\div$ is two times halved, this can be drilled, because they must know the tables.

This is a wonderful way of familiarising learners with posing problems, but it demands much and regular practice. As soon as they understand it and can do it with confidence, they put forward wonderful ideas.

Begin with a very simple number sentence, e.g. $3 + 4 = \square$. Initially, let the learners name objects with which they can possibly work, and write these suggestions on the blackboard: trees, flowers, sweets, sheep, dogs, etc.

Everyone must be involved and try to give suggestions. Make the rows compete and then let them pose the problems as a kind of competition.

The vertical addition and subtraction calculations have been graded from simple to difficult so that it will be easy for you to determine a learner's problem(s). This will enable you to concentrate on the problem areas only and to give appropriate similar exercises to help them.

With the last row of addition calculations, completing the hundred (carrying over the tens) is done incidentally to determine which of the learners understand this already. However, you are free to facilitate this formally now.

It must be a pattern that is repeated every 2 blocks and therefore it must be exactly the same throughout. It can also be offered with Technology, and the learners can then draw their own blocks on a larger sheet of paper.

Explain rounding off to the nearest R to the learners. Let them bring old catalogues and practise rounding off until they understand it.

This worksheet will give you a good idea of which learners are able to follow and carry out instructions. Any learner who has a good grasp of hundreds, tens and units at this stage, should be capable of completing this worksheet quite easily. Point out to the learners that if they do not get the same answer in the balloon vertically and horizontally, there is a mistake somewhere and they will have to check the answers vertically and horizontally again.

More examples with smaller numbers can also be given.

Table 2.5

1. Have you found it? Write it down and complete it:	
2. Now add two noughts to each number and write the new number	r sentence.
3. Find all the numbers in the block with 2 hundreds and write the	em down here:
4. Arrange them from the most to the least:	
5. Fill in the missing numbers:	
205 206 207	_ 214
221 223 225	239
230 235 240	
203 213 223	
275 274 273	0.00
258 256 254	240
265 260 255	220
297 287 277	207

- See how Bonny and Tommy have solved their problem.
- Bonny has 25 sweets and Tommy has 17. How many sweets do they have altogether?
- See how Bonny and Tommy have solved their problem.
- Bonny has 25 sweets and Tommy has 17. How many sweets do they have altogether?

Figure 2.5

- Here is a calculation that could cause problems.
- See what Bonny and Tommy have done:

Mother bakes 52 cookies and they eat 16 of them. How many cookies are left?

Figure 2.6

There are not enough units to take away the 6. Regroup a ten.

2.1.7 Assessment

Learning Outcome 1: The learner will be able to recognise, describe and represent numbers and their relationships, and to count, estimate, calculate and check with competence and confidence in solving problems.

Assessment Standard 1.1: We know this when the learner counts forwards and backwards in:

1.1.1 the intervals specified in grade 2 with increased number ranges;

Assessment Standard 1.3: We know this when the learner knows, reads and writes number symbols and names from 1 to at least 1 000;

Assessment Standard 1.4: We know this when the learner orders, describes and compares numbers;

Assessment Standard 1.5: We know this when the learner recognises the place value of digits in whole numbers to at least 3-digit numbers;

Assessment Standard 1.8: We know this when the learner can perform calculations, using appropriate symbols, to solve problems;

Assessment Standard 1.10: We know this when the learner uses the following techniques:

- 1.10.1 building up and breaking down numbers;
- 1.10.2 doubling and halving;
- 1.10.3 number-lines;
- 1.10.4 rounding off in tens.

Learning Outcome 4: The learner will be able to use appropriate measuring units, instruments and formulae in a variety of contexts.

Assessment Standard 4.2: We know this when the learner solves problems involving calculations with and conversions;

Assessment Standard 4.3: We know this when the learner identifies important dates on calendars;

Learning Outcome 5: The learner will be able to collect, summarise, display and critically analyse data in order to draw conclusions and make predictions, and to interpret and determine chance variation.

Assessment Standard 5.1: We know this when the learner collects data (alone and/or as a member of a group or team) in the classroom and school environment to answer questions posed by the teacher and class (e.g. 'how many learners walk to school?').

2.2 Coins²

2.2.1 MATHEMATICS

2.2.2 Bonny and Tommy's birthday party

2.2.3 EDUCATOR SECTION

2.2.4 Memorandum

- More advanced work is covered, but the educator will benefit greatly if pages (completing the calendar)
 are done with all the learners simultaneously. Groups 2 and 3 can then afterwards continue with the
 work with which they are busy.
- Number Concept to 400
- Operations:
- Addition two digit numbers with two digit numbers, using regrouping of a ten.
- Subtraction two digit numbers from two digit numbers, using regrouping of a ten.
- Multiplication -2x, 4x, 5x and 10x to the 10th multiple (tables).
- Division $\div 2$, $\div 4$, $\div 5$ and $\div 10$ to the 10th multiple (tables).

Integrate the design of the hat and the gift wrap with Technology. This can be done classically.

²This content is available online at http://cnx.org/content/m32457/1.1/>.

All the calculations involving money and other quantities which the learners work with will enable them to realise that Mathematics is part of our daily activities.

From Module 3 onwards the learners will gradually progress to the more advanced work of Grade 3. It may be necessary sometimes to go back to previous work to expedite the transition to the advanced work.

It is important that the learners should realise that addition and subtraction combinations as well as the tables, multiplication and division, simply have to be repeated regularly and must be learnt until they know it! It is basic work that cannot be neglected.

Attached you will find a sheet with tables presented in a specific order. You can copy it and give it to the learners so that they can keep it with them.

These worksheets can be presented to the whole class at the same time. Learners must write the dates on the calendar on their own, therefore it is of the utmost importance that you will make quite sure that all the learners begin on the correct day in January. I suggest that you fill in 1 January yourself before copying the worksheet. If you like, you could even fill it in further, depending on the competence of the learners.

It is important for the learners to understand the difference between days of the week (7) and workdays, school days or week days (5), otherwise they may make numerous errors in their calculations.

The learners must be aware of the patterns that are used in completing tables, therefore they must identify the pattern initially before they try to complete the table.

This is a vertical numbers line. The negative numbers have been filled in so that the learner will realise that numbers smaller than 0 do exist. It is not necessary to give this aspect much attention at this stage. It can just be mentioned in passing, to satisfy the learners who are keen to know more.

Explain to the learners that they are seeing diagrams, and that each symbol represents the value of the place where it stands.

Regrouping the 10 is being done now. The learners must first lay it out on the mat, so that it is experienced as something concrete, and so that they can see that there are 12 units and that they can therefore make another ten. This ten is then grouped with the other tens.

It depends on the educator and the abilities of the learners whether they are going to use carried numbers when doing the vertical calculations

The breaking up of the ten is also learnt now. Learners must work with this on the mat in order to experience in concrete terms that there are not enough units and that a ten must be regrouped in order to get enough units. They must understand the breaking up (regrouping) of the ten very well before they can do it in writing.

Again it depends on the educator and the abilities of the learners whether they are going to make use of carried numbers in vertical calculations.

$2 \times 0 = 02 \times 1 =$	$4 \times 0 = 04 \times 1 =$		$0 \div 2 = 02 \div 2 =$	$0 \div 4 = 04 \div 4 =$

Figure 2.10

Bonny and Tommy say:

It is easy to work with 1c, 2c, 5c and 10c coins.

• What is the amount in the purse?

Figure 2.11

• Write down the value of the coins that are in their purses: (1c, 2c, 5c en 10c)

Figure 2.12

• Now decide which coins, and how many, are in their purses, and then draw them.

16c

47c

4c

63c

39c

28c

• Bonny and Tommy like tables.

• This table of equal values helps them to calculate how many and which coins they have to get when they fetch change from the bank.

	m R1 = 100c																		
50c 50c																			
20c 20c 20					0c $20c$ $20c$														
10	0c	10	Эс	10)c	10	10c 10c				10c 10c 10c 10c				10	Эс			
5c	5 c	5 c	5c	5c	5c	5c	5c	5c	5c	5c	5c	5c	5c	5c	5c	5c	5c	5c	5c

Table 2.10

• Complete the tables:

R1 coins	1	2	3	4	5	6	7	8	9	10
50c coins	2	4								

Table 2.11

R1 coins	1	2	3	4	5	6	7	8	9	10
10c coins	10	20	30							

Table 2.12

• Bonny has 10 10c coins in her purse. She swops with Tommy who gives her 1 coin for them. Which coin did he give her?

She got a $____$ coin.

• Tommy has a R2 coin and exchanges it with his mother for 50c coins. How many coins did he get?

He got a $____$ 50c coins.

• Bonny goes to the bank with 200 1c coins. She comes back with 2 coins. What did the bank give her?

She got 2 $___$ coins. Who knows?

$$R1 =$$
 ____c $R2 =$ ___c $R3 =$ ___c $R4 =$ __c $R5 =$ __c $R10 =$ __c

• Use any method to do the calculations, but show how you do them. Leave out the R and c signs when you do the calculations, but remember to write them down when you give the answer.

$\boxed{ \text{R45} + \text{R23} = ____}$	$oxed{R60+R28=____}$
${f R28} + {f R52} = ____$	$ m R39 + R16 + R20 = ____$
$oxed{48c - 15c = ___}$	96c - 50c =
80c - $27c =$	$94\mathrm{c}$ - $30\mathrm{c}$ - $16\mathrm{c}$ =

Table 2.13

50c +	- 50c -	+ 50c +	50c +	50c +	50c +	50c =	

- Solve the problems in your own way.Write down the number sentences.

1.	Bonny bought 3 chocolates. Each one cost 31c. How much did she pay?
	She paid .
	She paid How much change did she get if she paid with a R1-coin?
	She got
	2. Tommy bought 5 bags of marbles. Each bag cost R2,10. How much did he pay for all the marbles?
	He paid
	He gave R12. How much change did he get?
	He got
	3. Bonny would very much like to buy herself a pen. The pen costs R13 and she has R10, 80 in her
рu	rse. How much does she still need?
	She needs
	4. Every day Tommy buys himself an ice cream that costs R2. He has R14 left in his purse. For how
ma	any days will he still be able to buy an ice cream?
	He can
	5. Mommy gave Bonny and Tommy R65 to share equally between the two of them. How much did each
on	e get?
	Each one got
	6. How many c in:
	R1,67 = c $R2,99 = $ c $R3,06 = $ c
	$\mathrm{R1,}20+\overline{\mathrm{R1,}15}=$ c $\overline{\mathrm{R0,}55}+\overline{\mathrm{R4,}}10=$ c
	7. Make each amount R1, 50 more:
	R20,20 R29, 49

• Calculate the costs of what we buy:

I buy:		I pay:		
5	60	5 × 6 =	c	
2	300	2 × 30 =	c	
8	\$ 5c	8 x 5 =	c	
9	100	9 x 10 =	c	
3	R50	3 × 5 =	R	
ı	# URIE CO	1 × 15 =	R	

Figure 2.13

• Calculate the change:

Koop vir:	Betaal met:	Kleingeld:
35c	50c	
79c	90c	
R75	R100	

Table 2.14

- Mommy says that Bonny and Tommy may each invite 4 friends to their party.
- 1. There will be _____ children. (Make sure that your answer is correct.)
 - 2. Calculate how many of everything they need and how much it costs.

Figure 2.14

2.2.7 Assessment

Learning Outcome 1: The learner will be able to recognise, describe and represent numbers and their relationships, and to count, estimate, calculate and check with competence and confidence in solving problems.

Assessment Standard 1.1: We know this when the learner counts forwards and backwards in:

1.1.1 the intervals specified in grade 2 with increased number ranges;

Assessment Standard 1.6: We know this when the learner solves money problems involving totals and change in rands and cents, including converting between rands and cents;

Assessment Standard 1.8: We know this when the learner can perform calculations, using appropriate symbols, to solve problems;

Assessering standaard 1.9: We know this when the learner performs mental calculations;

Learning Outcome 2: The learner will be able to recognise, describe and represent patterns and relationships, as well as to solve problems using algebraic language and skills.

Assessering standaard 2.2: We know this when the learner copies and extends simple number sequences to at least 1 000.

2.3.2 Bonny and Tommy's birthday party

2.3.3 EDUCATOR SECTION

2.3.4 Memorandum

- More advanced work is covered, but the educator will benefit greatly if pages (completing the calendar)
 are done with all the learners simultaneously. Groups 2 and 3 can then afterwards continue with the
 work with which they are busy.
- Number Concept to 400
- Operations:
- Addition two digit numbers with two digit numbers, using regrouping of a ten.
- Subtraction two digit numbers from two digit numbers, using regrouping of a ten.
- Multiplication -2x, 4x, 5x and 10x to the 10th multiple (tables).
- Division $\div 2$, $\div 4$, $\div 5$ and $\div 10$ to the 10th multiple (tables).

Integrate the design of the hat and the gift wrap with Technology. This can be done classically.

All the calculations involving money and other quantities which the learners work with will enable them to realise that Mathematics is part of our daily activities.

From Module 3 onwards the learners will gradually progress to the more advanced work of Grade 3. It may be necessary sometimes to go back to previous work to expedite the transition to the advanced work.

It is important that the learners should realise that addition and subtraction combinations as well as the tables, multiplication and division, simply have to be repeated regularly and must be learnt until they know it! It is basic work that cannot be neglected.

Attached you will find a sheet with tables presented in a specific order. You can copy it and give it to the learners so that they can keep it with them.

These worksheets can be presented to the whole class at the same time. Learners must write the dates on the calendar on their own, therefore it is of the utmost importance that you will make quite sure that all the learners begin on the correct day in January. I suggest that you fill in 1 January yourself before copying the worksheet. If you like, you could even fill it in further, depending on the competence of the learners.

It is important for the learners to understand the difference between days of the week (7) and workdays, school days or week days (5), otherwise they may make numerous errors in their calculations.

The learners must be aware of the patterns that are used in completing tables, therefore they must identify the pattern initially before they try to complete the table.

This is a vertical numbers line. The negative numbers have been filled in so that the learner will realise that numbers smaller than 0 do exist. It is not necessary to give this aspect much attention at this stage. It can just be mentioned in passing, to satisfy the learners who are keen to know more.

Explain to the learners that they are seeing diagrams, and that each symbol represents the value of the place where it stands.

Regrouping the 10 is being done now. The learners must first lay it out on the mat, so that it is experienced as something concrete, and so that they can see that there are 12 units and that they can therefore make another ten. This ten is then grouped with the other tens.

It depends on the educator and the abilities of the learners whether they are going to use carried numbers when doing the vertical calculations

The breaking up of the ten is also learnt now. Learners must work with this on the mat in order to experience in concrete terms that there are not enough units and that a ten must be regrouped in order to get enough units. They must understand the breaking up (regrouping) of the ten very well before they can do it in writing.

³This content is available online at http://cnx.org/content/m32453/1.1/>.

Again it depends on the educator and the abilities of the learners whether they are going to make use of carried numbers in vertical calculations.

$ \begin{array}{cccccccccccccccccccccccccccccccccccc$	$\begin{array}{c} 4 \ x \ 0 = 04 \ x \ 1 = \\ 44 \ x \ 2 = 84 \ x \ 3 = \\ 124 \ x \ 4 = 164 \ x \ 5 \\ = 204 \ x \ 6 = 244 \ x \\ 7 = 284 \ x \ 8 = 324 \\ x \ 9 = 364 \ x \ 10 = \\ 40 \end{array}$	$0 \div 2 = 02 \div 2 = 14 \div 2 = 26 \div 2 = 38 \div 2 = 410 \div 2 = 512 \div 2 = 614 \div 2 = 716 \div 2 = 818 \div 2 = 920 \div 2 = 10$	$0 \div 4 = 04 \div 4 = 18 \div 4 = 212 \div 4 = 316 \div 4 = 420 \div 4 = 524 \div 4 = 628 \div 4 = 732 \div 4 = 836 \div 4 = 940 \div 4 = 10$
$\begin{array}{cccccccccccccccccccccccccccccccccccc$	$\begin{array}{c} 10 \text{ x } 0 = 010 \text{ x } 1 \\ = 1010 \text{ x } 2 = 2010 \\ \text{x } 3 = 3010 \text{ x } 4 = \\ 4010 \text{ x } 5 = 5010 \\ \text{x } 6 = 6010 \text{ x } 7 = \\ 7010 \text{ x } 8 = 8010 \text{ x } \\ 9 = 9010 \text{ x } 10 = \\ 100 \end{array}$	$0 \div 5 = 05 \div 5 = 110 \div 5 = 215 \div 5 = 320 \div 5 = 425 \div 5 = 530 \div 5 = 635 \div 5 = 740 \div 5 = 845 \div 5 = 950 \div 5 = 10$	$0 \div 10 = 010 \div 10$ $= 120 \div 10 = 230$ $\div 10 = 340 \div 10$ $= 450 \div 10 = 560$ $\div 10 = 670 \div 10 =$ $780 \div 10 = 890 \div$ $10 = 9100 \div 10 =$ 10
$3 \times 0 = 03 \times 1 = 33 \times 2 = 63 \times 3 = 93 \times 4 = 123 \times 5 = 153 \times 6 = 183 \times 7 = 213 \times 8 = 243 \times 9 = 273 \times 10 = 30$	$6 \times 0 = 06 \times 1 = 66 \times 2 = 126 \times 3 = 186 \times 4 = 246 \times 5 = 306 \times 6 = 366 \times 7 = 426 \times 8 = 486 \times 9 = 546 \times 10 = 60$	$0 \div 3 = 03 \div 3 = 16 \div 3 = 29 \div 3 = 312 \div 3 = 415 \div 3 = 518 \div 3 = 621 \div 3 = 724 \div 3 = 827 \div 3 = 930 \div 3 = 10$	$0 \div 6 = 06 \div 6 = 112 \div 6 = 218 \div 6 = 324 \div 6 = 430 \div 6 = 536 \div 6 = 642 \div 6 = 748 \div 6 = 854 \div 6 = 960 \div 6 = 10$

Table 2.15

The important fact here is the equivalence of different coins. There are learners who will indicate 7c as 4c and 3c in coins, and who will not realise that such coins do not exist in our currency.

It is also the ideal opportunity for learners to learn 5x and \div if they have not yet done so.

Point out to the learners that in calculations the R and c are left out, but that they must be inserted in the completed number sentence (answers).

Encourage the learners to keep on drawing what they read and then to write the number sentence in order to solve the problem.

Make very sure that all the learners know that there will be 10 children at the party. (8 + Bonny + Tommy) If this information is incorrect, all the following calculations will be extremely difficult.

Designing and making the party hat can be done as part of Technology.

Demonstrate and discuss the 3 ways in which to draw a circle.

Do a great deal of practical work.

Make sure that they understand and know what the centre, diameter and radius of a circle is, and that 2x radius = diameter. Explain to the learners what the circumference of the circle is.

The learners must indicate all points with letters right from the beginning. Show them that it makes it much easier to discuss and explain various aspects of the construction. They must understand that they may use any letter, as long as the same letter is not used twice in the same construction.

Once more discuss the different ways in which to divide squares and rectangles into halves and quarters.

Much concrete and semi-concrete work must be done when the learners have to divide numbers into quarters, especially when the number is not a multiple of 4. Use objects such as fruit and soft sweets that can actually be broken up quite easily, and not hard objects such as marbles, stones or bottle caps.

Explain to the learners that it will depend on the problem whether you can break it up into fractions or not.

Look at this: Daddy has 25 sheep that have to be herded into 4 pens. How many sheep will there be in each pen? (The remaining sheep cannot be cut up.)

Daddy has slaughtered 25 sheep and takes them to 4 butcheries. How many does each butchery get? (It will certainly be possible to divide the remaining sheep into 4.) Discuss more similar examples.

As soon as the learners understand that 4x is 2 times doubled, and $4\div$ is two times halved, this can be drilled, because they must know the tables.

This is a wonderful way of familiarising learners with posing problems, but it demands much and regular practice. As soon as they understand it and can do it with confidence, they put forward wonderful ideas.

Begin with a very simple number sentence, e.g. $3+4=\square$. Initially, let the learners name objects with which they can possibly work, and write these suggestions on the blackboard: trees, flowers, sweets, sheep, dogs, etc.

Everyone must be involved and try to give suggestions. Make the rows compete and then let them pose the problems as a kind of competition.

The vertical addition and subtraction calculations have been graded from simple to difficult so that it will be easy for you to determine a learner's problem(s). This will enable you to concentrate on the problem areas only and to give appropriate similar exercises to help them.

With the last row of addition calculations, completing the hundred (carrying over the tens) is done incidentally to determine which of the learners understand this already. However, you are free to facilitate this formally now.

It must be a pattern that is repeated every 2 blocks and therefore it must be exactly the same throughout. It can also be offered with Technology, and the learners can then draw their own blocks on a larger sheet of paper.

Explain rounding off to the nearest R to the learners. Let them bring old catalogues and practise rounding off until they understand it.

This worksheet will give you a good idea of which learners are able to follow and carry out instructions.

Any learner who has a good grasp of hundreds, tens and units at this stage, should be capable of completing this worksheet quite easily. Point out to the learners that if they do not get the same answer in the balloon vertically and horizontally, there is a mistake somewhere and they will have to check the answers vertically and horizontally again.

More examples with smaller numbers can also be given.

Table 2.16

2.3.5 LEANER SECTION

2.3.6 Content

2.3.6.1 ACTIVITY: Halve [LO 1.4, LO 1.7, LO 1.8, LO 1.10, LO 3.1, LO 3.3, LO 4.6]

• Bonny and Tommy want to make a party hat for each child. You will have to help with the design. Complete yours and tell us how you planned and made it.

I used a circle in my design. I am saying no more.

• How can we draw a circle?

Use any round object to draw it, or a stencil, or a pair of compasses. At home you can use a plate if you want to draw a circle.

• What do we know about circles?

They are round and have no angles. Look at the circle below and then we'll learn more about circles:

Figure 2.15

AB is the diameter. It halves the circle.

- All lines that you draw from the centre to the circumference of the circle will be exactly the same length. We call such a line the radius of the circle.
- Take a piece of string or wool and lay it precisely on the circular line (the circumference). Measure the length of the string on your ruler. That is how you can measure the circumference of a circle.
- Bonny and Tommy are very keen to work with circles.

Figure 2.16

• Measure the radius and the circumference of each circle and write it down here.

• What have you discovered?

Now we know: $2 \times \text{Radius} = \text{Diameter}$ and $\text{Diameter} \div 2 = \text{Radius}$

• Use this to calculate the lengths:

```
\begin{array}{lll} \mbox{Circle W: Radius} = 5\mbox{cm Diameter} = \_\_\_\_\mbox{cm} & \mbox{(Double)} \\ \mbox{Circle X: Radius} = 8\mbox{cm Diameter} = \_\_\_\_\mbox{cm} \\ \mbox{Circle Y: Diameter} = 12\mbox{cm Radius} = \_\_\_\_\mbox{cm} & \mbox{(Halve)} \\ \mbox{Circle Z: Diameter} = 22\mbox{cm Radius} = \_\_\_\_\mbox{cm} \end{array}
```

• How can you find the centre of a circle that has been drawn without a pair of compasses?

Draw 2 circles that are exactly the same size. Cut out one of the circles. Fold it exactly in half and then in half again. Open it out and find the spot where the 4 folds cross in the centre. That is the centre of the circle. Lay it exactly on the other circle and push a pin down through the centre to make a mark on the circle below. Try it at home and come and show it to the class.

• This circle is divided into 4 equal parts. It is divided into 4 quarters.

Figure 2.17

- \odot Colour **one** of the quarters. That is I of the 4 parts. This is how we write it: $\frac{1}{L}$
- ② Now colour another quarter of the circle. What do you see? The two quarters of the circle are exactly the same size as one half of the circle, thus $\frac{2}{L} = \frac{1}{2}$
- Now colour one more quarter of the circle. Now 3 of the \angle parts have been coloured in. This is how we write it. $\frac{3}{2}$ So we see that $\frac{1}{2} + \frac{1}{2} = \frac{3}{2}$
 - Colour another quarter in. Now the whole circle has been coloured in, thus $\frac{\mathcal{L}}{L} = 1.$
- ② Divide each of the shapes into 4 quarters. Use any method.
- © Colour $\frac{1}{4}$ of the largest square, and $\frac{1}{2}$ of the largest rectangle
- Colour 3/7 of the other square and the whole of the rectangle that is still left.

Figure 2.18

- Sometimes Bonny and Tommy share their sweets with Mommy and Daddy.
- Can you still remember how we folded the circle into 4 equal parts? We folded the circle in half and then in half again.
- That is exactly what they do with the sweets.

Figure 2.19

All multiples of 4 can easily be divided into quarters like this.

 $\bullet~$ Count in multiples of 4 up to the 10th multiple and back again.

4	8	 	 	 	
40		 	 	 	 4

Table 2.17

• Complete the table.

Multiples of 4	4	8	12	16	20	24	28	32	36	40
÷ 2	2	4								
÷ 4	1	2								

 Table 2.18

 $\bullet~$ Thus: $\div~4$ is the same as halving 2 times.

Number	Halve	Halve again

2.3.7 Assessment

Learning Outcome 1: The learner will be able to recognise, describe and represent numbers and their relationships, and to count, estimate, calculate and check with competence and confidence in solving problems.

Assessment Standard 1.4: We know this when the learner orders, describes and compares numbers:

Assessment Standard 1.7: We know this when the learner solves and explains solutions to practical problems that involve equal sharing and grouping and that lead to solutions that also include unitary and nonunitary fractions (e.g. $\frac{1}{4}$, $\frac{3}{4}$);

Assessment Standard 1.8: We know this when the learner can perform calculations, using appropriate symbols, to solve problems;

Assessment Standard 1.10: We know this when the learner uses the following techniques:

- 1.10.1 building up and breaking down numbers;
- 1.10.2 doubling and halving;
- 1.10.3 number-lines;
- 1.10.4 rounding off in tens.

Learning Outcome 3: The learner will be able to describe and represent characteristics and relationships between two-dimensional shapes and three-dimensional objects in a variety of orientations and positions.

Assessment Standard 3.1: We know this when the learner recognises, identifies and names two-dimensional shapes and three-dimensional objects in the environment and in pictures;

Assessment Standard 3.3: We know this when the learner observes and creates given and described two-dimensional shapes and three-dimensional objects using concrete materials (e.g. building blocks, construction sets, cut-out two-dimensional shapes, clay, drinking straws);

Learning Outcome 4: The learner will be able to use appropriate measuring units, instruments and formulae in a variety of contexts.

Assessment Standard 4.6: We know this when the learner investigates (alone and/or as a member of a group or team) and approximates.

Learners must work with this on the mat in order to experience in concrete terms that there are not enough units and that a ten must be regrouped in order to get enough units. They must understand the breaking up (regrouping) of the ten very well before they can do it in writing.

Again it depends on the educator and the abilities of the learners whether they are going to make use of carried numbers in vertical calculations.

$2 \times 0 = 02 \times 1 =$	$4 \times 0 = 04 \times 1 =$		$0 \div 2 = 02 \div 2 =$	$0 \div 4 = 04 \div 4 =$	
$22 \times 2 = 42 \times 3 =$	$44 \times 2 = 84 \times 3 =$		$14 \div 2 = 26 \div 2 =$	$18 \div 4 = 212 \div 4$	
$62 \times 4 = 82 \times 5 =$	$124 \times 4 = 164 \times 5$		$38 \div 2 = 410 \div 2$	$= 316 \div 4 = 420 \div$	
$102 \times 6 = 122 \times 7$	$= 204 \times 6 = 244 \times$		$=512\div 2=614\div$	$4 = 524 \div 4 = 628$	
$= 142 \times 8 = 162 \times 8 = 162 \times 10^{-1}$	$7 = 284 \times 8 = 324$		$2 = 716 \div 2 = 818$	$ \div 4 = 732 \div 4 =$	
$9 = 182 \times 10 = 20$	$x 9 = 364 \times 10 =$		$\div~2~=~920~\div~2~=$	$836 \div 4 = 940 \div 4$

$3 \times 0 = 03 \times 1 =$ $33 \times 2 = 63 \times 3 =$ $93 \times 4 = 123 \times 5 =$ $153 \times 6 = 183 \times 7$ $= 213 \times 8 = 243 \times$ $9 = 273 \times 10 = 30$	$6 \times 0 = 06 \times 1 =$ $66 \times 2 = 126 \times 3 =$ $186 \times 4 = 246 \times 5$ $= 306 \times 6 = 366 \times$ $7 = 426 \times 8 = 486$ $\times 9 = 546 \times 10 =$ 60	$0 \div 3 = 03 \div 3 = 16 \div 3 = 29 \div 3 = 312 \div 3 = 415 \div 3 = 518 \div 3 = 621 \div 3 = 724 \div 3 = 827 \div 3 = 930 \div 3 = 10$	$112 \div 6 = 218 \div 6$ = $324 \div 6 = 430 \div$

Table 2.20

The important fact here is the equivalence of different coins. There are learners who will indicate 7c as 4c and 3c in coins, and who will not realise that such coins do not exist in our currency.

It is also the ideal opportunity for learners to learn 5x and \div if they have not yet done so.

Point out to the learners that in calculations the R and c are left out, but that they must be inserted in the completed number sentence (answers).

Encourage the learners to keep on drawing what they read and then to write the number sentence in order to solve the problem.

Make very sure that all the learners know that there will be 10 children at the party. (8 + Bonny + Tommy) If this information is incorrect, all the following calculations will be extremely difficult.

Designing and making the party hat can be done as part of Technology.

Demonstrate and discuss the 3 ways in which to draw a circle.

Do a great deal of practical work.

Make sure that they understand and know what the centre, diameter and radius of a circle is, and that 2x radius = diameter. Explain to the learners what the circumference of the circle is.

The learners must indicate all points with letters right from the beginning. Show them that it makes it much easier to discuss and explain various aspects of the construction. They must understand that they may use any letter, as long as the same letter is not used twice in the same construction.

Once more discuss the different ways in which to divide squares and rectangles into halves and quarters. Much concrete and semi-concrete work must be done when the learners have to divide numbers into quarters, especially when the number is not a multiple of 4. Use objects such as fruit and soft sweets that can actually be broken up quite easily, and not hard objects such as marbles, stones or bottle caps.

Explain to the learners that it will depend on the problem whether you can break it up into fractions or not.

Look at this: Daddy has 25 sheep that have to be herded into 4 pens. How many sheep will there be in each pen? (The remaining sheep cannot be cut up.)

Daddy has slaughtered 25 sheep and takes them to 4 butcheries. How many does each butchery get? (It will certainly be possible to divide the remaining sheep into 4.) Discuss more similar examples.

As soon as the learners understand that 4x is 2 times doubled, and $4\div$ is two times halved, this can be drilled, because they must know the tables.

This is a wonderful way of familiarising learners with posing problems, but it demands much and regular practice. As soon as they understand it and can do it with confidence, they put forward wonderful ideas.

Begin with a very simple number sentence, e.g. $3+4=\square$. Initially, let the learners name objects with which they can possibly work, and write these suggestions on the blackboard: trees, flowers, sweets, sheep, dogs, etc.

Everyone must be involved and try to give suggestions. Make the rows compete and then let them pose the problems as a kind of competition.

The vertical addition and subtraction calculations have been graded from simple to difficult so that it will be easy for you to determine a learner's problem(s). This will enable you to concentrate on the problem areas only and to give appropriate similar exercises to help them.

With the last row of addition calculations, completing the hundred (carrying over the tens) is done incidentally to determine which of the learners understand this already. However, you are free to facilitate this formally now.

It must be a pattern that is repeated every 2 blocks and therefore it must be exactly the same throughout. It can also be offered with Technology, and the learners can then draw their own blocks on a larger sheet of paper.

Explain rounding off to the nearest R to the learners. Let them bring old catalogues and practise rounding off until they understand it.

This worksheet will give you a good idea of which learners are able to follow and carry out instructions. Any learner who has a good grasp of hundreds, tens and units at this stage, should be capable of completing this worksheet quite easily. Point out to the learners that if they do not get the same answer in the balloon vertically and horizontally, there is a mistake somewhere and they will have to check the answers vertically and horizontally again.

More examples with smaller numbers can also be given.

• Use the blocks and design a pattern for the gift-wrap for Bonny and Tommy.

 Table 2.23

• Here are some gifts you could buy for Bonny and Tommy. Let us round off the prices to the nearest rand. If the cents are 50c or more than 50c, R1 is added, but if it is 49c or less, it is thrown away.

Figure 2.23

Figure 2.24

- Calculate how far you have walked. The distance between two dots is 2 metres.
- Walk along the path, count in twos and draw a circle around each dot where you complete the ten.

How far have you walked? ____m

Now you must measure the length of the rugby field. First decide how you can do it, and then which is going to be the best way.

Who is going to join the party?

- Bonny and Tommy are still looking for friends they can invite to their party.
- To find out, add these blocks across and down. The first one has been done for you.

2.4.7 Assessment

Learning Outcome 1: The learner will be able to recognise, describe and represent numbers and their relationships, and to count, estimate, calculate and check with competence and confidence in solving problems. Assessment Standard 1.4: We know this when the learner orders, describes and compares numbers;

Assessment Standard 1.7: We know this when the learner solves and explains solutions to practical problems that involve equal sharing and grouping and that lead to solutions that also include unitary and nonunitary fractions (bv. $\frac{1}{4}$, $\frac{3}{4}$);

Assessment Standard 1.8: We know this when the learner can perform calculations, using appropriate symbols, to solve problems;

Assessment Standard 1.9: We know this when the learner performs mental calculations;

Assessment Standard 1.10: We know this when the learner uses the following techniques:

- 1.10.1 building up and breaking down numbers;
- 1.10.2 doubling and halving;
- 1.10.3 number-lines;
- 1.10.4 rounding off in tens.

Learning Outcome 3: The learner will be able to describe and represent characteristics and relationships between two-dimensional shapes and three-dimensional objects

Assessment Standard 3.6: We know this when the learner reads, interprets and draws informal maps of the school environment or of an arrangement of three-dimensional objects and locates objects on the map;

Learning Outcome 4: The learner will be able to use appropriate measuring units, instruments and formulae in a variety of contexts.

Assessment Standard 4.5: We know this when the learner estimates, measures, compares and orders three-dimensional objects using non-standard and standard measures.

2.5.3 EDUCATOR SECTION

2.5.4 Memorandum

- Number Concept to 600
- Operations:
- Addition two and three digit numbers with and without regrouping of the ten.
- Subtraction two and three digit numbers with and without regrouping of the ten.
- Multiplication two digit number with a one digit number without regrouping the tens to 99.
- Division two digit numbers divided by a one digit number without a remainder or regrouping the tens to 99.
- The 3× and 3÷ tables to the tenth multiple are taught. These conclude the tables to be learnt in Grade 3. Repetition and testing should be done regularly.
- The telling of time is very important. It is recommended that this be done classically as it requires much preparation and is immensely time consuming.

The learners each need a clock to handle and can construct one out of cardboard before the lesson.

In module 4 the number concept is extended to 600. Addition and subtraction calculations include two and three digit numbers. Multiplication and division calculations are done without regrouping of tens, and only up to 99.

In learning 3x and \div up to the 10th multiple, the tables that have to be mastered in Grade 3 are completed. Regular repetition and testing are vitally important from this stage on.

It is recommended that the **reading of time** be done with all the learners at the same time. Each learner must have a cardboard clock to use when the work is being done.

⁵This content is available online at http://cnx.org/content/m32263/1.1/>.

Such a clock can be made from a paper plate, or the learners can be allowed to design their own clock for Technology. However, it must be ready before the reading of time is started in class. A great deal of practical exercise is necessary before the learners can complete the worksheets.

Number concept is now extended from 400 to 600 and the number blocks of hundreds, tens and units, as well as the flared cards, (attached to Module 2), must still be used to promote the number concept. Give special attention once again to the 100 that must be **regrouped** when 300 and 500 are halved: 300 = 200 + 100 = 400 + 100

Counting in sixes must be done incidentally and can also be repeated on the multiples chart (Module 2). Learners must know: 1 dozen = 12.

Learners must have the opportunity, and be encouraged, to say what they can deduce from the graph, what can change and what will not change, before they have to write about it. Such a discussion will give you a good indication of what the learners understand and which aspects need more attention.

Learning 3x and ÷ must be done on the mat and with the use of concrete apparatus. The worksheets are only there to apply what has already been taught.

Learners must get the opportunity in class, on a daily basis if possible, to take measurements with the ruler, the metre stick and the trundle wheel. The more practice they get, the more **accurately** they will measure. However, always encourage them to **estimate** first.

This is enrichment work and if you find that it is too advanced, it can be done at a later stage. There may be learners who would like to accept the challenge.

Seeing that 3x and \div have just been done, it is easy to introduce **thirds** now. Give the learners loose paper shapes and allow them to fold and measure on their own, so that they can discover how it can be done. Some of the learners will know how to find **sixths** without any help. (Only enrichment)

The idea with the recipe is to make the learners understand that certain standard units and containers must be used, otherwise there is no chance of success with a recipe.

Let the learners mention more examples of the use of standard units in practice, e.g. petrol, milk, mixing medicines, prescriptions for administering medication, etc.

It is essential that all the different standard measuring containers and scales, as well as sand, water and objects used in measuring **volume** and **mass**, should be available in the classroom. Learners should be able to experiment every day with measuring and weighing, using standard units: **litres** and **millilitres** and **grams** and **milligrams**.

A bathroom scale is required to determine the mass of the learners.

Different methods are used for the multiplication and division calculations, but should you prefer another method and you find that the learners understand it better, it is their right to use the preferred method.

It is essential that many similar examples of the relevant number sentences be done or ally before the learners are expected to complete this worksheet.

The **regrouping** of a hundred when adding or subtracting is now formally taught. Sufficient concrete work must be done beforehand. More advanced work where a ten and a hundred are regrouped simultaneously, should not be done at the same time. It will depend on the abilities of the group whether it should be done immediately hereafter or at a much later stage.

Whether the learners will be allowed to make use of carried numbers, remains the decision of the educator. e.g.

Learners will need a blank sheet of paper in order to calculate the shortest route. Some learners may find it difficult and may want to give up, but with a little help they should be able to do it.

A discussion on what they will see as they approach the farmstead by road is necessary before the learners will be able to draw it.

2.5.5 LEANER SECTION

2.5.6 Content

2.5.6.1 ACTIVITY: To read time [LO 4.1, LO 4.2]

• Bonny and Tommy each got a watch for their birthday. Take a paper plate or cut a circle from cardboard and design your own clock (watch) from which you can tell the time.

Remember::

- 1 day = 24 hours
- 1 hour = 60 minutes
- 1 minute = 60 seconds

Hours: When the long hand is on the 12 and the short hand is exactly on a number, the clock indicates hours. Set your "clock" to match these below:

Figure 2.25

Figure 2.26

What is the time?

• Draw the long and the short hands on the clocks

Figure 2.27

• Bonny and Tommy went to play at a friend's house at two o' clock, and they returned home at five o' clock. How many hours had they been away from home?

They had been away for _____ hours.

• An hour can be divided into 2 half-hours

1 hour = 60 minuteshalf-hour = 30 minutes

Half-hours: If the long hand is on the 6 and the short hand is halfway between two numbers, it indicates half-hours. Set your "clock" to match these below.

Figure 2.28

• What is the time?

Figure 2.29

• Draw the long and the short hands on the clocks:

Figure 2.30

• **Bonny and Tommy** each does 8 sums in half an hour. How many sums will they do altogether in 1 hour?

They will do ______

She will drive ______

• Mother drives 50 km in half an hour. How far will she drive in $2\frac{1}{2}$ hours?

_

• How many half-hours are there in 4 hours? 4 hours = _____ half-hours

• An hour can be divided into 4 quarters. Then you have 4 quarters of an hour.

 $\begin{array}{l} 1 \ \text{hour} = 60 \ \text{minutes} \\ \text{half-hour} = 30 \ \text{minutes} \\ \text{quarter-hour} = 15 \ \text{minute} \end{array}$

> $\textbf{Quarter-hours}. \ \text{If the long hand} \ \text{is on the 3} \ \text{and the short hand} \ \text{is just past a}$ number, it indicates that it is ${\color{black} \textbf{quarter past}}.$ If the ${\color{black} \textbf{long hand}}$ is on the ${\color{black} \textbf{9}}$ and the short hand is just before a number, it indicates that it is quarter to. Set your "clock" to match these below.

Figure 2.31

What is the time

Figure 2.32

• Draw the long and the short hands on these clocks::

Figure 2.33

• Complete the table:

quarter-hours	1	2	3	4	5	6	7	8
minutes	15	30						

Table 2.24

The **long hand** is sometimes called the **minute hand**, because it always indicates how many minutes have passed since the beginning of a new hour. It takes 5 minutes to move from one number to the next and 60 minutes (I hour) to move right around. Set your "clock" to match these below.

Figure 2.34

• What is the time?

Figure 2.35

• Draw the long and the short hands on the clocks::

Figure 2.36

A discussion on what they will see as they approach the farmstead by road is necessary before the learners will be able to draw it.

2.6.5 LEANER SECTION

2.6.6 Content

2.6.6.1 ACTIVITY: To measure [LO 1.1, LO 1.4, LO 1.11, LO 4.5]

In order to measure **accurately**, we have to make use of **standard units**. Shorter lengths are measured in **centimetres** and **millimetres**. We can use a ruler to do this. 10mm = 1 cm

Longer lengths are measured in **metres** and for this we can use a metre stick, a tape measure or a trundle wheel. 100cm = 1 m

.metre	1	2	3	4	5	6	7	8	9
centimetre	100								

Table 2.25

Figure 2.37

Use your ruler and measure the lengths:

- Use your ruler and draw a line 14cm long. Now halve it.
- Draw a line 12cm long and divide it into 4 quarters.
- Use the **metre stick** to measure two objects in the classroom that are longer than your ruler but shorter than the metre stick. **Estimate first.**

Object	Estimated	Measured	Too much or too little

Table 2.26

• Use the tape measure to measure the height of two of your friends. Estimate first.

Object	Estimated	Measured	Too much or too little

Table 2.27

- Use the **trundle wheel** to measure the length of the stoep or the corridor.
- Measure it. It is _____ long.
- I was wrong by ______
- Tommy is going to help Grandpa to make a new camp for Granny's chickens. The new camp will be rectangular - 50m long and 30m wide.
- Measure the length of the 4 sides of this rectangle.

Figure 2.38

 $AD = _____$ AB =BC = $\mathrm{CD} = \underline{\hspace{1cm}}$ We discover: $\mathrm{AD} = \mathrm{BC}$ and $\mathrm{AB} = \mathrm{CD}$

The two opposite sides of a rectangle are of the same length.

Thus: 2 times the length plus 2 times the width (breadth) is equal to the perimeter of the rectangle. $(2 \times 1) + (2 \times b) = perimeter$

This is how we write it: $2 \mathbf{l} + 2 \mathbf{b} = \text{perimeter}$

- ullet 2 times the lengths is ____ cm and 2 times the width is ____ cm.
- The perimeter of the rectangle is _____ cm.

Now Bonny and Tommy know how to calculate what length of wire netting is needed to make the camp. They only have to calculate the perimeter of the camp.

- $\bullet\,\,$ 2 times the length is _ _ _ m and 2 times the width is _ _ _ m.
- 2 l + 2 b = perimeter

- The perimeter of the camp is _____ m.
 The camp will have a wooden gate that is 1m in width. Thus Grandpa has to buy only _____ m wire netting.
- The rectangle has been divided into three equal parts. Colour in 1 of the 3 parts.

Which part of each shape has been coloured in?

Which part of each shape has been coloured in?

2.6.7 Assessment

Learning Outcome 1: The learner will be able to recognise, describe and represent numbers and their relationships, and to count, estimate, calculate and check with competence and confidence in solving problems.

Assessment Standard 1.4: We know this when the learner orders, describes and compares numbers; Assessment Standard 1.11: We know this when the learner explains own solutions to problems;

Learning Outcome 4: The learner will be able to use appropriate measuring units, instruments and formulae in a variety of contexts.

Assessment 4.5: We know this when the learner estimates, measures, compares and orders three-dimensional objects using non-standard and standard measures.

2.7.4 Memorandum

- Number Concept to 600
- Operations:
- Addition two and three digit numbers with and without regrouping of the ten.
- Subtraction two and three digit numbers with and without regrouping of the ten.
- Multiplication two digit number with a one digit number without regrouping the tens to 99.
- Division two digit numbers divided by a one digit number without a remainder or regrouping the tens to 99.
- The 3× and 3÷ tables to the tenth multiple are taught. These conclude the tables to be learnt in Grade 3. Repetition and testing should be done regularly.
- The telling of time is very important. It is recommended that this be done classically as it requires much preparation and is immensely time consuming.

The learners each need a clock to handle and can construct one out of cardboard before the lesson.

In module 4 the number concept is extended to 600. Addition and subtraction calculations include two and three digit numbers. Multiplication and division calculations are done without regrouping of tens, and only up to 99.

In learning 3x and \div up to the 10th multiple, the tables that have to be mastered in Grade 3 are completed. Regular repetition and testing are vitally important from this stage on.

It is recommended that the **reading of time** be done with all the learners at the same time. Each learner must have a cardboard clock to use when the work is being done.

Such a clock can be made from a paper plate, or the learners can be allowed to design their own clock for Technology. However, it must be ready before the reading of time is started in class. A great deal of practical exercise is necessary before the learners can complete the worksheets.

Number concept is now extended from 400 to 600 and the number blocks of hundreds, tens and units, as well as the flared cards, (attached to Module 2), must still be used to promote the number concept. Give special attention once again to the 100 that must be **regrouped** when 300 and 500 are halved: 300 = 200 + 100 = 400 + 100

Counting in sixes must be done incidentally and can also be repeated on the multiples chart (Module 2). Learners must know: 1 dozen = 12.

⁷This content is available online at http://cnx.org/content/m32267/1.1/>.

Learners must have the opportunity, and be encouraged, to say what they can deduce from the graph, what can change and what will not change, before they have to write about it. Such a discussion will give you a good indication of what the learners understand and which aspects need more attention.

Learning 3x and ÷ must be done on the mat and with the use of concrete apparatus. The worksheets are only there to apply what has already been taught.

Learners must get the opportunity in class, on a daily basis if possible, to take measurements with the ruler, the metre stick and the trundle wheel. The more practice they get, the more **accurately** they will measure. However, always encourage them to **estimate** first.

This is enrichment work and if you find that it is too advanced, it can be done at a later stage. There may be learners who would like to accept the challenge.

Seeing that 3x and \div have just been done, it is easy to introduce **thirds** now. Give the learners loose paper shapes and allow them to fold and measure on their own, so that they can discover how it can be done. Some of the learners will know how to find **sixths** without any help. (Only enrichment)

The idea with the recipe is to make the learners understand that certain standard units and containers must be used, otherwise there is no chance of success with a recipe.

Let the learners mention more examples of the use of standard units in practice, e.g. petrol, milk, mixing medicines, prescriptions for administering medication, etc.

It is essential that all the different standard measuring containers and scales, as well as sand, water and objects used in measuring **volume** and **mass**, should be available in the classroom. Learners should be able to experiment every day with measuring and weighing, using standard units: **litres** and **millilitres** and **grams** and **milligrams**.

A bathroom scale is required to determine the mass of the learners.

Different methods are used for the multiplication and division calculations, but should you prefer another method and you find that the learners understand it better, it is their right to use the preferred method.

It is essential that many similar examples of the relevant number sentences be done or ally before the learners are expected to complete this worksheet.

The **regrouping** of a hundred when adding or subtracting is now formally taught. Sufficient concrete work must be done beforehand. More advanced work where a ten and a hundred are regrouped simultaneously, should not be done at the same time. It will depend on the abilities of the group whether it should be done immediately hereafter or at a much later stage.

Whether the learners will be allowed to make use of carried numbers, remains the decision of the educator. e.g.

Learners will need a blank sheet of paper in order to calculate the shortest route. Some learners may find it difficult and may want to give up, but with a little help they should be able to do it.

A discussion on what they will see as they approach the farmstead by road is necessary before the learners will be able to draw it.

2.7.6 Content

2.7.6.1 ACTIVITY: Mass [LO 1.8, LO 1.9, LO 2.2, LO 4.5]

• Bonny and Granny want to make some pancakes. If they want the pancakes to be a success, they have to measure the ingredients accurately.

Dry ingredients such as flour and sugar are measured in **grams** and **kilograms**. A standard measuring cup and standard measuring spoons are used. You may use a kitchen scale to weigh the ingredients. **Remember:** $1\ 000\ g = 1\ kg$

Liquids such as oil, milk and water are measured in millilitres and litres, and a standard measuring jug and measuring spoons are used. Remember: 1 000 m $\ell = 1\ell$

• Here is their recipe. Why don't you try it out at school or at home

Ingredients:
4 cups (544g) cake flour
4 eggs
1 cup $(250\mathrm{m}\ell)$ oil
1 t $(5m\ell)$ salt
$\frac{1}{4} \operatorname{cup} (63 \mathrm{m} \ell) \operatorname{vinegar}$
1ℓ water
$4 ext{ t. } (20 ext{m}\ell) ext{ baking powder}$
Method:
1. Beat the eggs, oil, vinegar and a little of the water very well.
2. Sift the flour and the salt together.
3. Add the flour and the rest of the water little by little to the egg mixture and whisk it thoroughly.
4. Lastly, add the baking powder.
5. Heat a lightly oiled pan. Pour a small quantity of the batter into the pan. Turn it over to brown th
pancake on both sides.
6. Turn it out onto a plate, sprinkle with cinnamon sugar, and roll it. This recipe makes 60 pancakes.
How many pancakes are there for each learner if there are 30 learners in the class? There are
Calculate the ingredients you will need if you want to double the recipe:
cake flour
eggs
water
oil
baking powder
1,

Estimate which 5 learners in your class have the smallest mass, write their names in the table and ask your educator to weigh them.

Name	Estimated mass	Weighed mass	Too much or too little

 Table 2.28

•	Who of the 5 learners have the greatest mass?
•	Who of the 5 learners have the smallest mass?
•	What is the difference between the two masses?
•	What is the total mass of the 5 learners?

• Find the mass of the following objects, but first estimate whether it is more or less than 1 kg:

Object(s)	More/less than 1 kg	Weighed	Right/wrong
Your shoes			
School bag			
Lunch box			
A brick			
10 books			

Table 2.29

• Calculate the total mass of each of the following. Mother buys:

```
3 x 2 kg rice ______
   5 x 10 kg potatoes______
  6 x 100 g jelly_____

2.8.7 Assessment

Learning Outcome 1: The learner will be able to recognise, describe and represent numbers and their relationships, and to count, estimate, calculate and check with competence and confidence in solving problems.

Assessment Standard 1.8: We know this when the learner can perform calculations, using appropriate symbols, to solve problems;

Assessment Standard 1.10: We know this when the learner uses the following techniques:

- 1.10.1 building up and breaking down numbers;
- 1.10.2 doubling and halving;
- 1.10.3 number-lines;
- 1.10.4 rounding off in tens.

Learning Outcome 2: The learner will be able to recognise, describe and represent patterns and relationships, as well as to solve problems using algebraic language and skills.

Assessment Standard 2.2: We know this when the learner copies and extends simple number sequences to at least 1 000;

Learning Outcome 3: The learner will be able to describe and represent characteristics and relationships between two-dimensional shapes and three-dimensional objects in a variety of orientations and positions.

Assessment Standard 3.5: We know this when the learner recognises and describes three-dimensional objects from different positions.

3.1.4 Memorandum

- Number Concept to 800
- Operations:
- Addition two and three digit numbers with regrouping (carrying) of the tens or hundreds.
- Subtraction two and three digit numbers with regrouping (decomposition) of the tens or hundreds.
- Multiplication two digit numbers with a one digit number with regrouping (carrying) of the tens.
- Division with a remainder in the range of the tables.
- two digit numbers with a one digit number without regrouping of the tens to 99.

Division with a remainder but without the regrouping (decomposition) of the tens is taught. This demands much work in the range of the tables. The learners need to understand this stage very well before they work with higher numbers. **Testing of the tables is essential.**

In Module 5, the **number concept** is expanded to **800**. In addition and subtraction, two- and three-digit numbers are introduced. Multiplication is done with regrouping of tens. Division with a remainder, but without regrouping or breaking up of tens, is taught. Initially it is only done in the number range of the tables. The learners need to have a very good understanding of this before it can be extended to larger numbers. Testing of tables remains extremely important.

Here the learners are exposed to other ways of summarising data. An oral discussion of possible changes and the results thereof is necessary.

Ensure that the learners realise that they need to cover the distance between the school and their homes at least twice daily: They come to school and have to go home again.

The learners need to find out what the distance between home and school is before they do the work on this page.

This is the first Grade 3 Module to expose learners to determining particular points on a graph so that they can draw the graph, and for working with 2 sets of data on the same graph. You therefore need to be doubly sure that they understand how this is done. Easier examples could be discussed in preparation for the exercise.

 $^{^{1}}$ This content is available online at <http://cnx.org/content/m32271/1.1/>.

Precede this with a discussion on what a bus looks like from the **front** and from the **rear** before you let the learners attempt the drawings.

Counting in 8's must be done before the table at the bottom of this page is completed.

Learners must discover the relationship (pattern). There are similar patterns on p. 11.

This worksheet is simply aimed at determining the level of thinking involved with operations requiring addition and subtraction and finding out where special attention is required. The work sheet does not have to be completed in one session.

Concrete work is necessary to explain the regrouping of tens during multiplication.

Ensure that the learners understand the patterns where division is involved before expecting them to complete the exercises.

Here we deal with **division with a remainder**. Explain that it is sometimes impossible to **divide the remainder** into fractions, simply because of the nature of the problem.

E.g. 1 fried or boiled egg can be divided but 1 uncooked egg cannot be divided and shared.

This is written as the remainder (rem.).

Begin with work in the number range of the tables (to tenth multiple). You will need much concrete work and lots of repetition, because it is very important that the learners understand what they are doing before you go on to larger numbers.

The learners must do research in books and pamphlets about the different traffic signs and discuss them before they complete the signs.

Many pictures and different objects with these shapes are required to ensure that the learners recognise all the shapes.

Make the learners aware of the fact that there is no easy way of folding or dividing for obtaining **fifths**of 2-D shapes. This must be determined by **measuring**.

It may be necessary to help the learners to determine the location of the first square that must be coloured in. Do not offer help if they are able to find it independently.

Encourage learners to tell where they live and how they would explain the route to their home to someone else. Help them to explain an easy route to find a certain room in the school.

3.1.5 LEANER SECTION

3.1.6 Content

3.1.6.1 ACTIVITY: Distance [LO 1.1, LO 1.3, LO 1.4, LO 1.8, LO 1.9, LO 1.10, LO 3.5, LO 5.1, LO 5.2, LO 5.3, LO 5.4, LO 5.5]

All of us are **road users**: pedestrians, cyclists, drivers of vehicles, or passengers. It is important to know and obey traffic rules and road signs.

3.1.7 Assessment

Learning Outcome 1: The learner will be able to recognise, describe and represent numbers and their relationships, and to count, estimate, calculate and check with competence and confidence in solving problems.

Assessment Standard 1.1: We know this when the learner counts forwards and backwards in:

1.1.1 the intervals specified in grade 2 with increased number ranges;

Assessment Standard 1.3: We know this when the learner knows, reads and writes number symbols and names from 1 to at least 1 000;

Assessment Standard 1.4: We know this when the learner orders, describes and compares numbers; Assessment Standard 1.8: We know this when the learner can perform calculations, using appropriate symbols, to solve problems;

Assessment Standard 1.9: We know this when the learner performs mental calculations;

Assessment Standard 1.10: We know this when the learner uses the following techniques:

- 1.10.1 building up and breaking down numbers;
- 1.10.2 doubling and halving;
- 1.10.3 number-lines;
- 1.10.4 rounding off in tens.

Learning Outcome 3: The learner will be able to describe and represent characteristics and relationships between two-dimensional shapes and three-dimensional objects in a variety of orientations and positions.

Assessment Standard 3.5: We know this when the learner recognises and describes three-dimensional objects from different positions;

Learning Outcome 5: The learner will be able to collect, summarise, display and critically analyse data in order to draw conclusions and make predictions, and to interpret and determine chance variation.

Assessment Standard 5.1: We know this when the learner collects data (alone and/or as a member of a group or team) in the classroom and school environment to answer questions posed by the teacher and class (e.g. 'how many learners walk to school?');

Assessment Standard 5.2: We know this when the learner sorts, orders and organises own and supplied data by one or more attributes for a particular reason. chosen by the teacher;

Assessment Standard 5.3: We know this when the learner draws pictures and constructs pictographs and bar graphs that have a 1-1 correspondence between own data and representation;

Assessment Standard 5.4: We know this when the learner reads, interprets and reports on information in own and a peer's representations of data.

Assessment Standard 5.5: We know this when the learner reads and interprets data presented in simple tables and lists.

3.2.3 EDUCATOR SECTION

3.2.4 Memorandum

- Number Concept to 800
- Operations:
- Addition two and three digit numbers with regrouping (carrying) of the tens or hundreds.
- Subtraction two and three digit numbers with regrouping (decomposition) of the tens or hundreds.
- Multiplication two digit numbers with a one digit number with regrouping (carrying) of the tens.
- Division with a remainder in the range of the tables.
- two digit numbers with a one digit number without regrouping of the tens to 99.

Division with a remainder but without the regrouping (decomposition) of the tens is taught. This demands much work in the range of the tables. The learners need to understand this stage very well before they work with higher numbers. **Testing of the tables is essential.**

In Module 5, the **number concept** is expanded to **800**. In addition and subtraction, two- and three-digit numbers are introduced. Multiplication is done with regrouping of tens. Division with a remainder, but without regrouping or breaking up of tens, is taught. Initially it is only done in the number range of the tables. The learners need to have a very good understanding of this before it can be extended to larger numbers. Testing of tables remains extremely important.

Here the learners are exposed to other ways of summarising data. An oral discussion of possible changes and the results thereof is necessary.

²This content is available online at http://cnx.org/content/m32276/1.1/>.

Ensure that the learners realise that they need to cover the distance between the school and their homes at least twice daily: They come to school and have to go home again.

The learners need to find out what the distance between home and school is before they do the work on this page.

This is the first Grade 3 Module to expose learners to determining particular points on a graph so that they can draw the graph, and for working with 2 sets of data on the same graph. You therefore need to be doubly sure that they understand how this is done. Easier examples could be discussed in preparation for the exercise.

Precede this with a discussion on what a bus looks like from the **front** and from the **rear** before you let the learners attempt the drawings.

Counting in 8's must be done before the table at the bottom of this page is completed.

Learners must discover the relationship (pattern). There are similar patterns on p. 11.

This worksheet is simply aimed at determining the level of thinking involved with operations requiring addition and subtraction and finding out where special attention is required. The work sheet does not have to be completed in one session.

Concrete work is necessary to explain the regrouping of tens during multiplication.

Ensure that the learners understand the patterns where division is involved before expecting them to complete the exercises.

Here we deal with **division with a remainder**. Explain that it is sometimes impossible to **divide the remainder** into fractions, simply because of the nature of the problem.

E.g. 1 fried or boiled egg can be divided but 1 uncooked egg cannot be divided and shared.

This is written as the **remainder** (rem.).

Begin with work in the number range of the tables (to tenth multiple). You will need much concrete work and lots of repetition, because it is very important that the learners understand what they are doing before you go on to larger numbers.

The learners must do research in books and pamphlets about the different traffic signs and discuss them before they complete the signs.

Many pictures and different objects with these shapes are required to ensure that the learners recognise all the shapes.

Make the learners aware of the fact that there is no easy way of folding or dividing for obtaining **fifths**of 2-D shapes. This must be determined by **measuring**.

It may be necessary to help the learners to determine the location of the first square that must be coloured in. Do not offer help if they are able to find it independently.

Encourage learners to tell where they live and how they would explain the route to their home to someone else. Help them to explain an easy route to find a certain room in the school.

- two digit numbers with a one digit number without regrouping of the tens to 99.

Division with a remainder but without the regrouping (decomposition) of the tens is taught. This demands much work in the range of the tables. The learners need to understand this stage very well before they work with higher numbers. **Testing of the tables is essential.**

In Module 5, the **number concept** is expanded to **800**. In addition and subtraction, two- and three-digit numbers are introduced. Multiplication is done with regrouping of tens. Division with a remainder, but without regrouping or breaking up of tens, is taught. Initially it is only done in the number range of the tables. The learners need to have a very good understanding of this before it can be extended to larger numbers. Testing of tables remains extremely important.

Here the learners are exposed to other ways of summarising data. An oral discussion of possible changes and the results thereof is necessary.

Ensure that the learners realise that they need to cover the distance between the school and their homes at least twice daily: They come to school and have to go home again.

The learners need to find out what the distance between home and school is before they do the work on this page.

This is the first Grade 3 Module to expose learners to determining particular points on a graph so that they can draw the graph, and for working with 2 sets of data on the same graph. You therefore need to be doubly sure that they understand how this is done. Easier examples could be discussed in preparation for the exercise.

Precede this with a discussion on what a bus looks like from the **front** and from the **rear** before you let the learners attempt the drawings.

Counting in 8's must be done before the table at the bottom of this page is completed.

Learners must discover the relationship (pattern). There are similar patterns on p. 11.

This worksheet is simply aimed at determining the level of thinking involved with operations requiring addition and subtraction and finding out where special attention is required. The work sheet does not have to be completed in one session.

Concrete work is necessary to explain the regrouping of tens during multiplication.

Ensure that the learners understand the patterns where division is involved before expecting them to complete the exercises.

Here we deal with **division with a remainder.** Explain that it is sometimes impossible to **divide the remainder** into fractions, simply because of the nature of the problem.

E.g. 1 fried or boiled egg can be divided but 1 uncooked egg cannot be divided and shared.

This is written as the **remainder (rem.)**.

 $^{^3}$ This content is available online at <http://cnx.org/content/m32298/1.1/>.

Begin with work in the number range of the tables (to tenth multiple). You will need much concrete work and lots of repetition, because it is very important that the learners understand what they are doing before you go on to larger numbers.

The learners must do research in books and pamphlets about the different traffic signs and discuss them before they complete the signs.

Many pictures and different objects with these shapes are required to ensure that the learners recognise all the shapes.

Make the learners aware of the fact that there is no easy way of folding or dividing for obtaining **fifths**of 2-D shapes. This must be determined by **measuring**.

It may be necessary to help the learners to determine the location of the first square that must be coloured in. Do not offer help if they are able to find it independently.

Encourage learners to tell where they live and how they would explain the route to their home to someone else. Help them to explain an easy route to find a certain room in the school.

3.3.6 Content

3.3.6.1 ACTIVITY: Divide with a rem [LO 1.7, LO 1.8, LO 3.1]

- Bonny and Tommy discovered that some numbers couldn't be divided equally. They are the numbers that are not multiples of the divisors. Sometimes the remainder can be divided into smaller parts, but this is not always possible.
- Take a good look: Bonny has to divide 13 apples between herself and Tommy. How many will each one get?

Figure 3.15

 $13 \div 2 = 6\frac{1}{2}$

• Now look at this:

Tommy wants to divide 13 marbles equally between himself and Jaco. How many marbles will each one get and how many will be left over?

Figure 3.16

Each one gets 6 and 1 is left over. (Tommy cannot halve the marble.)

• He thought about it like this:

The nearest **multiple of 2** that is **less than** 13, is 12. He worked with $12 \div 2$ and knew that 1 would be left over. (Regroup: 12 + 1) The 1 that is left over is known as the **remainder**. $13 \div 2 \neg 6$ rem. 1

Number sentence	Nearest multiple	Remainder	Complete number sentence
$1 \ 3 \div 27 \div 21 \ 1 \div 21 \ 5 \div 21 \ 9 \div 2$	$\begin{array}{ c c c c c c c c c c c c c c c c c c c$	1	$1 \ 3 \div 2 \ \neg \ 6 \ \mathrm{rem} \ 1$

Table 3.2

• Do the same with the multiples of 3, 4, 5 and 10.

	Key:	Robots	O Stop signs	●Traffic circle	
			Figure 3.25		

 $\mathbf{Figure} \ \mathbf{3.26}$

Colour the following squares to mark the route that the bus takes.

```
Down: Across
3: 1 1, 1 2, 1 3, 1 4
4: 1 1
5: 1 1
6: 1 1
7: 1 1
8: 3, 4, 5, 6, 7, 8, 9, 1 0, 1 1
1 5: 3, 4, 5, 6, 7, 8, 9, 1 0, 1 1, 1 2, 1 3, 1 4, 1 5
Down: Across
9: 3
1 0: 3
1 1: 3
1 2: 3
1 3: 3
1 4: 3
```

- If each square represents 100 m, the bus travels m.
- How many km is this? Try to work it out! It is km.
- Explain to a friend the route that the bus takes. Use the direction words **left** and **right**, as well as other information from the street plan. Now write the directions here:
- Where do **Bonny** and **Tommy** live? Follow the directions and draw the route on the street plan as you go.

Walk along School Street as far as Short Street; turn left into Short Street; walk as far as the stop sign; turn right into Church Street; walk to Long Street and turn right again, into Long Street. They live on the left hand side of Long Street, in the 2nd house from the corner.

- Colour in the square.
- What is the number of their house?

(Square : Down : Across)? ____ : ____ : ____

3.4.7 Assessment

Learning Outcome 1: The learner will be able to recognise, describe and represent numbers and their relationships, and to count, estimate, calculate and check with competence and confidence in solving problems.

Assessment Standard 1.4: We know this when the learner orders, describes and compares numbers; Assessment Standard 1.8: We know this when the learner can perform calculations, using appropriate symbols, to solve problems;

Learning Outcome 3: The learner will be able to describe and represent characteristics and relationships between two-dimensional shapes and three-dimensional objects in a variety of orientations and positions.

Assessment Standard 3.1: We know this when the learner recognises, identifies and names two-dimensional shapes and three-dimensional objects in the environment and in pictures.

Assessment Standard 3.6: We know this when the learner reads, interprets and draws informal maps of the school environment or of an arrangement of three-dimensional objects and locates objects on the map.

3.5 Money notes⁵

3.5.1 MATHEMATICS

3.5.2 Bonny and Tommy visit the zoo

3.5.3 EDUCATOR SECTION

3.5.4 Memorandum

- Number Concept to 1 000 (These are the minimum requirements for Grade 3.)
- Operations
- Addition two and three digit numbers with and without regrouping of the tens and/or hundreds.
- Subtraction two and three digit numbers with and without regrouping of the tens and/or hundreds.
- Multiplication two and three digit numbers with a one digit number, with or without regrouping of the tens.
- **Division** two digit numbers with a one digit number with regrouping of the tens but without a remainder, e.g. $75 \div 5 =$

(In the following module remainders with regrouping of the tens are practised again).

In Module 6 the **number concept** is extended to **1000**. Addition and subtraction is done with twoand three-digit numbers, with and without regrouping of tens and hundreds. Multiplication is done with two- and three-digit numbers with and without regrouping of tens. Division is done with two-digit numbers and regrouping of tens only, **without a remainder** in Module 6,

e.g. $75 \div 5 = \le$ (In the following module, the remainder will be included in regrouping.)

Learners need to know what the actual paper money looks like: R10-, R20-, R50-, R100- and R200-notes. They must understand the values and be able to do simple calculations.

Explain what drawing to scale signifies. They will have to be able to grasp this concept very well before they will be able to calculate the lengths of the elephants' trunks. Provide similar examples to ensure that they are able to do the exercise.

The learners need to develop a concrete image of the numerical value of 1000.

999 + 1 completes a <u>ten</u> that is taken to the **tens** to complete **10 tens**which make a <u>hundred</u>. The <u>hundred</u> is taken to the **hundreds** to complete **10 hundreds**. These make a group of a thousand which has to be taken to the **thousands**.

1000: the 1 represents 1 group of a thousand and the 3 noughts are the placeholders for the hundreds, tens and units.

Once the learners have completed the number block, it must be used for **many** counting exercises in tens and hundreds, counting forwards and backwards.

If learners are still struggling to master doubling and halving, they should be encouraged to use the "cloud" to assist the thinking process.

First work orally with similar examples using letter values, before allowing the learners to do the worksheet.

Multiplication with three-digit numbers, with regrouping of the tens, must first be practised orally and in the concrete.

Let the learners count in 9's before asking them to write it.

Help them to realise that it is easier to start by adding 10 and subtracting 1 than it is to add 9. The opposite is done when 9 is subtracted: take away 10 and add 1. Let them use counters.

If **10c** and **1c** pieces are used to explain the idea of regrouping tens during division, the learners will be helped to grasp that the tens have to be **broken up** and **regrouped with the ones** before it can be shared out. (Play money could be used.)

The learners may need much practice before they will have enough skill to complete the worksheet. It might help them to draw the diagrams.

This content is available online at http://cnx.org/content/m32301/1.1/.

The decision to make use of carried numbers is left to the educator.

First supply paper shapes for dividing into tens, so that the learners may discover for themselves that **tenths**, like thirds and fifths, have to be calculated and measured. It is not simply a matter of folding and folding again as in the case of a $\frac{1}{2}$ and a $\frac{1}{4}$.

Guide them to discover that they, by first obtaining **fifths**, can divide each fifth down the middle to obtain **tenths**.

Discuss **symmetrical shapes** with the learners. Let them identify symmetrical objects in the classroom. They should complete the drawing after this exercise.

- Use your own method to do the calculations.

The small antelope drinks 125 mℓ of milk at a time. He gets milk 4 times per day. How much milk does he drink altogether?

It drinks _____

• There are 69ℓ of water that have to be taken to 3 lion cages. How many litres of water can be taken to each cage?

Each cage ______

• One of the monkeys is ill and the vet has said that it must be given 20 mℓ of medicine in the morning and in the evening. How many teaspoonfuls will it drink in a day? Remember: 1 t = 5 m ℓ

It will drink			

3.6.7 Assessment

Learning Outcome 1: The learner will be able to recognise, describe and represent numbers and their relationships, and to count, estimate, calculate and check with competence and confidence in solving problems.

Assessment Standard 1.8: We know this when the learner can perform calculations, using appropriate symbols, to solve problems;

Learning Outcome 4: The learner will be able to use appropriate measuring units, instruments and formulae in a variety of contexts.

Assessment Standard 4.5: We know this when the learner estimates, measures, compares and orders three-dimensional objects using non-standard and standard measures;

Learning Outcome 5: The learner will be able to collect, summarise, display and critically analyse data in order to draw conclusions and make predictions, and to interpret and determine chance variation.

Assessment Standard 5.5: We know this when the learner reads and interprets data presented in simple tables and lists.

3.7 Number block⁷

3.7.1 MATHEMATICS

3.7.2 Bonny and Tommy visit the zoo

3.7.3 EDUCATOR SECTION

3.7.4 Memorandum

- Number Concept to 1 000 (These are the minimum requirements for Grade 3.)
- Operations:
- Addition two and three digit numbers with and without regrouping of the tens and/or hundreds.
- Subtraction two and three digit numbers with and without regrouping of the tens and/or hundreds.
- Multiplication two and three digit numbers with a one digit number, with or without regrouping of the tens.
- Division two digit numbers with a one digit number with regrouping of the tens but without a remainder, e.g. $75 \div 5 =$

(In the following module remainders with regrouping of the tens are practised again).

In Module 6 the number concept is extended to 1000. Addition and subtraction is done with two- and three-digit numbers, with and without regrouping of tens and hundreds. Multiplication is done with two- and three-digit numbers with and without regrouping of tens. Division is done with two-digit numbers and regrouping of tens only, without a remainder in Module 6,

e.g. $75 \div 5 = \pounds$ (In the following module, the remainder will be included in regrouping.)

Learners need to know what the actual paper money looks like: R10-, R20-, R50-, R100- and R200-notes. They must understand the values and be able to do simple calculations.

Explain what drawing to scale signifies. They will have to be able to grasp this concept very well before they will be able to calculate the lengths of the elephants' trunks. Provide similar examples to ensure that they are able to do the exercise.

The learners need to develop a concrete image of the numerical value of 1000.

999 + 1 completes a ten that is taken to the tens to complete 10 tens which make a hundred. The hundred is taken to the hundreds to complete 10 hundreds. These make a group of a thousand which has to be taken to the thousands.

1000: the 1 represents 1 group of a thousand and the 3 noughts are the placeholders for the hundreds, tens and units.

⁷This content is available online at http://cnx.org/content/m32455/1.1/>.

Once the learners have completed the number block, it must be used for many counting exercises in tens and hundreds, counting forwards and backwards.

If learners are still struggling to master doubling and halving, they should be encouraged to use the "cloud" to assist the thinking process.

First work orally with similar examples using letter values, before allowing the learners to do the work-sheet

Multiplication with three-digit numbers, with regrouping of the tens, must first be practised orally and in the concrete.

Let the learners count in 9's before asking them to write it.

Help them to realise that it is easier to start by adding 10 and subtracting 1 than it is to add 9. The opposite is done when 9 is subtracted: take away 10 and add 1. Let them use counters.

If 10c and 1c pieces are used to explain the idea of regrouping tens during division, the learners will be helped to grasp that the tens have to be broken up and regrouped with the ones before it can be shared out. (Play money could be used.)

The learners may need much practice before they will have enough skill to complete the worksheet.

It might help them to draw the diagrams.

The decision to make use of carried numbers is left to the educator.

First supply paper shapes for dividing into tens, so that the learners may discover for themselves that tenths, like thirds and fifths, have to be calculated and measured. It is not simply a matter of folding and folding again as in the case of a $\frac{1}{2}$ and a $\frac{1}{4}$.

Guide them to discover that they, by first obtaining fifths, can divide each fifth down the middle to obtain tenths.

Discuss symmetrical shapes with the learners. Let them identify symmetrical objects in the classroom. They should complete the drawing after this exercise.

3.7.6.1 ACTIVITY: Number block [LO 1.1, LO 1.3, LO 1.4, LO 1.5, LO 1.8, LO 1.9, LO 1.10]

• Which numbers do these diagrams represent?

Figure 3.31

- Here we have 9 hundreds, 9 tens and 9 units. Add 1 more unit to the last ten.
- Group the ten and then the hundred.

Now there are hundreds. It is equal to ______

• Complete the diagrams:

999: nine hundred and ninty nine

1000: one thousand

Figure 3.32

Complete the number block:

10	20	30	40	50	60	70	80	90	100
1 10					160				200
210									
									400
			440						
510									600
						670			
710									800
910									

Table 3.6

• When you move horizontally across the number block, you count in tens.

780 790	860
920 930	1000
950 940	970
860 850	790
• When you move vertically down the number block, you count in hundreds.	
200 300	1000
120 220	920
9650 860	160

• Complete:

Figure 3.33

- Write down all the 3-digit numbers that you can make with the numbers 3, 8 and 9:
- In which number does the 3 have the highest place value?
- In which of these numbers does the 9 have the lowest place value?
- Arrange the numbers from the most to the least:

• Fill in <, > of =:

$$\begin{array}{c} 650 \, + \, 30 \, \dots \dots \, 630 \, + \, 50 \\ 500 \, + \, 1 \, \, 62 \, \dots \dots \, 500 \, + \, 1 \, \, 26 \\ 348 \, + \, 1 \, 00 \, \dots \dots \, 200 \, + \, 250 \\ 730 \, - \, 1 \, 1 \, 0 \, \dots \dots \, 720 \, - \, 1 \, \, 00 \\ 852 \, - \, 400 \, \dots \dots \, \, 852 \, - \, 452 \\ 900 \, - \, 500 \, \dots \dots \, \, 900 \, - \, 400 \end{array}$$

• Give the even numbers to the elephant and the uneven numbers to the lion:

Figure 3.34

- What is the difference in mass between the lion and the bear?_____
- What is the sum of the mass of the lion and the bear?
- Which animal has a greater mass than the bear?
 Which mammal has a smaller mass than the lion?
- Double all the numbers on the tortoise's shell.

Figure 3.35

• Halve all these numbers.

812 808	780
830 825	790

• Add the numbers horizontally and vertically:

Figure 3.40

• Write an animal story to match the number sentence and do the calculation.

 $136 + 160 - 82 = ____$

• Complete:

Figure 3.41

• Use your own method to do the calculations:

3.7.7 Assessment

Learning Outcome 1: The learner will be able to recognise, describe and represent numbers and their relationships, and to count, estimate, calculate and check with competence and confidence in solving problems.

Assessment Standard 1.1: We know this when the learner counts forwards and backwards in:

1.1.1 the intervals specified in grade 2 with increased number ranges;

Assessment Standard 1.3: We know this when the learner knows, reads and writes number symbols and names from 1 to at least 1 000;

Assessment Standard 1.4: We know this when the learner orders, describes and compares numbers;

Assessment Standard 1.5: We know this when the learner recognises the place value of digits in whole numbers to at least 3-digit numbers;

Assessment Standard 1.8: We know this when the learner can perform calculations, using appropriate symbols, to solve problems;

Assessment Standard 1.9: We know this when the learner performs mental calculations;

Assessment Standard 1.10: We know this when the learner uses the following techniques:

- 1.10.1 building up and breaking down numbers;
- 1.10.2 doubling and halving;
- 1.10.3 number-lines;
- 1.10.4 rounding off in tens.

3.11.2 Bonny and Tommy visit the zoo

3.11.3 EDUCATOR SECTION

3.11.4 Memorandum

- Number Concept to 1 000 (These are the minimum requirements for Grade 3.)
- Operations:
- Addition two and three digit numbers with and without regrouping of the tens and/or hundreds.
- Subtraction two and three digit numbers with and without regrouping of the tens and/or hundreds.
- Multiplication two and three digit numbers with a one digit number, with or without regrouping of the tens.
- **Division** two digit numbers with a one digit number with regrouping of the tens but without a remainder, e.g. $75 \div 5 =$

(In the following module remainders with regrouping of the tens are practised again).

In Module 6 the **number concept** is extended to **1000**. Addition and subtraction is done with twoand three-digit numbers, with and without regrouping of tens and hundreds. Multiplication is done with two- and three-digit numbers with and without regrouping of tens. Division is done with two-digit numbers and regrouping of tens only, **without a remainder** in Module 6,

e.g. $75 \div 5 = \le$ (In the following module, the remainder will be included in regrouping.)

Learners need to know what the actual paper money looks like: R10-, R20-, R50-, R100- and R200-notes. They must understand the values and be able to do simple calculations.

Explain what drawing to scale signifies. They will have to be able to grasp this concept very well before they will be able to calculate the lengths of the elephants' trunks. Provide similar examples to ensure that they are able to do the exercise.

The learners need to develop a concrete image of the numerical value of 1000.

999 + 1 completes a <u>ten</u> that is taken to the **tens** to complete **10 tens**which make a <u>hundred</u>. The <u>hundred</u> is taken to the **hundreds** to complete **10 hundreds**. These make a group of a thousand which has to be taken to the **thousands**.

1000: the 1 represents 1 group of a thousand and the 3 noughts are the placeholders for the hundreds, tens and units.

Once the learners have completed the number block, it must be used for **many** counting exercises in tens and hundreds, counting forwards and backwards.

If learners are still struggling to master doubling and halving, they should be encouraged to use the "cloud" to assist the thinking process.

First work orally with similar examples using letter values, before allowing the learners to do the worksheet.

Multiplication with three-digit numbers, with regrouping of the tens, must first be practised orally and in the concrete.

Let the learners count in 9's before asking them to write it.

Help them to realise that it is easier to start by adding 10 and subtracting 1 than it is to add 9. The opposite is done when 9 is subtracted: take away 10 and add 1. Let them use counters.

If **10c** and **1c** pieces are used to explain the idea of regrouping tens during division, the learners will be helped to grasp that the tens have to be **broken up** and **regrouped with the ones** before it can be shared out. (Play money could be used.)

The learners may need much practice before they will have enough skill to complete the worksheet.

It might help them to draw the diagrams.

 $^{^{11}}$ This content is available online at <http://cnx.org/content/m32308/1.1/>.

The decision to make use of carried numbers is left to the educator.

First supply paper shapes for dividing into tens, so that the learners may discover for themselves that **tenths**, like thirds and fifths, have to be calculated and measured. It is not simply a matter of folding and folding again as in the case of a $\frac{1}{2}$ and a $\frac{1}{4}$.

Guide them to discover that they, by first obtaining **fifths**, can divide each fifth down the middle to obtain **tenths**.

Discuss **symmetrical shapes** with the learners. Let them identify symmetrical objects in the classroom. They should complete the drawing after this exercise.

Table 3.8

- The favourite animal of most of the learners in the class is the ______
- What is your favourite animal? Explain why.

3.11.7 Assessment

Learning Outcome 1: The learner will be able to recognise, describe and represent numbers and their relationships, and to count, estimate, calculate and check with competence and confidence in solving problems.

Assessment Standard 1.4: We know this when the learner orders, describes and compares numbers; Learning Outcome 3: The learner will be able to describe and represent characteristics and relationships between two-dimensional shapes and three-dimensional objects in a variety of orientations and positions.

Assessment Standard 3.4: We know this when the learner determines lines of symmetry in twodimensional shapes using paper folding and reflection;

Learning Outcome 5: The learner will be able to collect, summarise, display and critically analyse data in order to draw conclusions and make predictions, and to interpret and determine chance variation.

Assessment Standard 5.1: We know this when the learner collects data (alone and/or as a member of a group or team) in the classroom and school environment to answer questions posed by the teacher and class (e.g. 'how many learners walk to school?');

Assessment Standard 5.2: We know this when the learner sorts, orders and organises own and supplied data by one or more attributes for a particular reason. chosen by the teacher;

Assessment Standard 5.3: We know this when the learner draws pictures and constructs pictographs and bar graphs that have a 1-1 correspondence between own data and representation;

Assessment Standard 5.4: We know this when the learner reads, interprets and reports on information in own and a peer's representations of data.

Chapter 4

Term 4

4.1 Numbers¹

4.1.1 MATHEMATICS

4.1.2 Bonny and Tommy's school féte

4.1.3 EDUCATOR SECTION

4.1.4 Memorandum

It is imperative that the educator is familiar with the content of this module before it is given to the learners, as this module contains advanced and enrichment work. Learners in the first two groups should find it a challenge and should be able to cope with it. Do not expose learners to tasks that are too difficult for them and which frustrate them. (Select according to their abilities).

The activities, the construction of mobiles, can be done classically. They can be combined with Technology.

- Number Concept to 1 500
- Operations:
- Addition, subtraction and multiplication two and three digit numbers with and without regrouping of the tens and the hundreds;
- Division two digit numbers with regrouping of the tens and remainders, e.g. $66 \div 4 =$

In **Module 7** number concept is extended to 1500. All addition, subtraction and multiplication calculations are performed with 2-digit and 3-digit numbers with and without regrouping of hundreds and tens. Division is only done with 2-digit numbers with regrouping of tens, with a remainder e.g. $66 \div 4 =$

A discussion about the fête is necessary beforehand so that the learners may order their thoughts and plan the picture.

The learners must understand counting onwards from one thousand very well. Use similar number blocks from 1 101 to 1200, 1201 to 1300, 1301 to 1400 and 1401 to 1500 if necessary.

Shopping games should be used to help learners to calculate change.

Give special attention to equal quantities of and $m\ell$.

Use the posters for more calculations and provide opportunities for the learners to ask one another to do certain calculations.

This is an activity to be done on the playground. Let the learners measure with a trundle wheel.

Learners are expected to be able to count in a language other than their home language. If there are learners in the class who are proficient in another language, they should be given the opportunity to do so.

 $^{^{1}}$ This content is available online at <http://cnx.org/content/m32309/1.1/>.

These involve consolidation of operations. Attend to problem areas.

The calculations of fractions of numbers may cause problems for some learners. Encourage them to try, even if they only accomplish the easier ones.

The 8x and \div are done simultaneously with **eights.** It is not compulsory for them to know these.

Multiplication is done with regrouping of hundreds as well as tens.

This activity tests the learners' knowledge of numbers and reasoning abilities.

Division with regrouping the tens and a remainder requires much practice in the concrete. Learners must be able to say how they think and what they are doing before they attempt written work. Much practice is needed.

Encourage learners to test their operations.

This activity cannot be completed in one day. It can be combined with Technology. If there is not enough time, learners can be divided into groups of 5 to allow each learner to complete 1 shape, in which case the group will make a collective mobile sharing all knowledge with one another. If they find folding and pasting the round edges of the cone and cylinder they can paste these on the outside or they can cut off the round edges.

The shapes should preferably be duplicated on manilla, but if this is not available, use ordinary paper.

- The mixture in the container is enough for 100 pancakes. They planned to make 500 pancakes. Draw all the containers that they will need for the mixture.

They need _____ ℓ dough altogether.

• How many $\frac{1}{2}\ell$ (500 m ℓ) containers can be filled with the mixture?

• They are selling the pancakes for R2 each. How much money will they make if they sell all the pancakes?

• We know that 10ℓ of mixture makes 100 pancakes. How many pancakes can we make from 1ℓ of

4.1.7 Assessment

Learning Outcome 1: The learner will be able to recognise, describe and represent numbers and their relationships, and to count, estimate, calculate and check with competence and confidence in solving problems.

Assessment Standard 1.3: We know this when the learner knows, reads and writes number symbols and names from 1 to at least 1 000;

Assessment Standard 1.5: We know this when the learner recognises the place value of digits in whole numbers to at least 3-digit numbers;

Assessment Standard 1.6: We know this when the learner solves money problems involving totals and change in rands and cents, including converting between rands and cents;

Assessment Standard 1.9: We know this when the learner performs mental calculations;

Learning Outcome 3: The learner will be able to describe and represent characteristics and relationships between two-dimensional shapes and three-dimensional objects in a variety of orientations and positions.

Assessment Standard 3.6: We know this when the learner reads, interprets and draws informal maps of the school environment or of an arrangement of three-dimensional objects and locates objects on the map.

Learning Outcome 4: The learner will be able to use appropriate measuring units, instruments and formulae in a variety of contexts.

Assessment Standard 4.5: We know this when the learner estimates, measures, compares and orders three-dimensional objects using non-standard and standard measures.

4.2.6 Content

4.2.6.1 ACTIVITY: Calculations [LO 1.6, LO 1.8, LO 4.6, LO 5.5]

• Here is the poster that **Bonny** made to attract the people to their stalls.

Figure 4.3

• Calculate the costs:

Mary bought: 3 pancakes, 1 hotdog and 2 cool drinks. She paid
Terry bought: 2 hamburgers, 2 candy floss and 2 fruit juices.
He paid
Mom bought: 4 hotdogs, 4 puddings and 4 ice creams.
She paid
The twins bought: 4 pancakes, 2 fruit juices en 2 candy floss.
They paid
They planned to make $300hamburgers$. They will sell at $R5$ each. 10 meatballs can be made from
1 kg of mince. The mince is packed in 5 kg - packs.

• Complete the table:

packs of mince	1	2	3	4	
kg	5	10			
meat balls	50	100			
R altogether	250	500			

Table 4.2

•	• How many 5 kg-packs must they buy?							packs.											
•	If	1	kg	of	fr	$_{ m mince}$	is	needed	for	10	meatballs,	how	many	grams	are	needed	for	each	meat
	ba	11?																	

The sausages for the hotdogs were packed in 3 kg-packs. Each 3 kg-pack is enough for 25 hotdogs. They bought 8 such packs. The hotdogs will be sold at R3 each.

• Complete the table:

packs of sausage	1	2	3	4	5	6	7	8
kg	3	6	9					
hotdogs	25	50						
R altogether	75	150						

Table 4.3

- How many hotdogs will they make? _____ hotdogs.
 How much money will the hamburgers and the hotdogs bring in?

What is the difference between the amount of money made from the hamburgers and that from the

Tommy decided to help Dad with the pony rides. Here is the track that they measured off on the rugby field.

Figure 4.4

• What is the **perimeter** of the track?

One ride takes the pony twice around the track. It takes the pony 5 minutes to go round twice and to have a short rest.

- What distance will the pony cover for each ride?
- How many rides can the pony do in 1 hour?
- They are going to pay R5 per ride. How much money will they make if 50 children have pony rides?
- Who can calculate how far the pony will have walked altogether?
- Here is **Tommy's** poster.

Figure 4.5

Calculate how much some children paid for the fun.

ullet How much will you pay if you do everything 5 times?

• Bonny had 2 pony rides and 1 turn on the jumping castle.
She paid
• Tommy had 3 turns to shoot the air gun and 1 pony ride.
He paid
• Terry threw the balls twice and had 1 pillow fight.
She paid
• Shane did everything once .
He paid
• Robert did everything twice .
He paid

4.2.7 Assessment

Learning Outcome 1: The learner will be able to recognise, describe and represent numbers and their relationships, and to count, estimate, calculate and check with competence and confidence in solving problems.

Assessment Standard 1.6: We know this when the learner solves money problems involving totals and change in rands and cents, including converting between rands and cents;

Assessment Standard 1.8: We know this when the learner can perform calculations, using appropriate symbols, to solve problems;

Learning Outcome 4: The learner will be able to use appropriate measuring units, instruments and formulae in a variety of contexts.

Assessment Standard 4.6: We know this when the learner investigates (alone and/or as a member of a group or team) and approximates;

Learning Outcome 5: The learner will be able to collect, summarise, display and critically analyse data in order to draw conclusions and make predictions, and to interpret and determine chance variation.

Assessment Standard 5.5: We know this when the learner reads and interprets data presented in simple tables and lists.

4.3 Language, calculations and time³

4.3.1 MATHEMATICS

4.3.2 Bonny and Tommy's school féte

4.3.3 EDUCATOR SECTION

4.3.4 Memorandum

It is imperative that the educator is familiar with the content of this module before it is given to the learners, as this module contains advanced and enrichment work. Learners in the first two groups should find it a challenge and should be able to cope with it. Do not expose learners to tasks that are too difficult for them and which frustrate them. (Select according to their abilities).

The activities, the construction of mobiles, can be done classically. They can be combined with Technology.

- Number Concept to 1 500
- Operations:
- Addition, subtraction and multiplication two and three digit numbers with and without regrouping of the tens and the hundreds;
- Division two digit numbers with regrouping of the tens and remainders, e.g. $66 \div 4 =$

In **Module 7** number concept is extended to 1500. All addition, subtraction and multiplication calculations are performed with 2-digit and 3-digit numbers with and without regrouping of hundreds and tens. Division is only done with 2-digit numbers with regrouping of tens, with a remainder e.g. $66 \div 4 =$

A discussion about the féte is necessary beforehand so that the learners may order their thoughts and plan the picture.

The learners must understand counting onwards from one thousand very well. Use similar number blocks from 1 101 to 1200, 1201 to 1300, 1301 to 1400 and 1401 to 1500 if necessary.

Shopping games should be used to help learners to calculate change.

Give special attention to equal quantities of and $m\ell$.

Use the posters for more calculations and provide opportunities for the learners to ask one another to do certain calculations.

 $^{^3{}m This}$ content is available online at ${
m <http://cnx.org/content/m32315/1.1/>}$.

This is an activity to be done on the playground. Let the learners measure with a trundle wheel.

Learners are expected to be able to count in a language other than their home language. If there are learners in the class who are proficient in another language, they should be given the opportunity to do so.

These involve consolidation of operations. Attend to problem areas.

The calculations of fractions of numbers may cause problems for some learners. Encourage them to try, even if they only accomplish the easier ones.

The 8x and ÷ are done simultaneously with eights. It is not compulsory for them to know these.

Multiplication is done with regrouping of hundreds as well as tens.

This activity tests the learners' knowledge of numbers and reasoning abilities.

Division with regrouping the tens and a remainder requires much practice in the concrete. Learners must be able to say how they think and what they are doing before they attempt written work. Much practice is needed.

Encourage learners to test their operations.

This activity cannot be completed in one day. It can be combined with Technology. If there is not enough time, learners can be divided into groups of 5 to allow each learner to complete 1 shape, in which case the group will make a collective mobile sharing all knowledge with one another. If they find folding and pasting the round edges of the cone and cylinder they can paste these on the outside or they can cut off the round edges.

The shapes should preferably be duplicated on manilla, but if this is not available, use ordinary paper.

4.3.7 Assessment

Learning Outcome 1: The learner will be able to recognise, describe and represent numbers and their relationships, and to count, estimate, calculate and check with competence and confidence in solving problems.

Assessment Standard 1.2: We know this when the learner knows number names from 1 to at least 10 in the mother tongue (if not the language of learning and teaching) and one other local language;

Assessment Standard 1.4: We know this when the learner orders, describes and compares numbers; Assessment Standard 1.8: We know this when the learner can perform calculations, using appropriate symbols, to solve problems;

Assessment Standard 1.9: We know this when the learner performs mental calculations;

Assessment Standard 1.10: We know this when the learner uses the following techniques:

- 1.10.1 building up and breaking down numbers;
- 1.10.2 doubling and halving;
- 1.10.3 number-lines;
- 1.10.4 rounding off in tens.

Learning Outcome 2: The learner will be able to recognise, describe and represent patterns and relationships, as well as to solve problems using algebraic language and skills.

Assessment Standard 2.2: We know this when the learner copies and extends simple number sequences to at least 1 000.

Learning Outcome 4::The learner will be able to use appropriate measuring units, instruments and formulae in a variety of contexts.

Assessment Standard 4.1: We know this when the learner reads and writes analogue and digital clock time in terms of hours, half-hours, quarters of an hour and minutes;

Assessment Standard 4.2: We know this when the learner solves problems involving calculations with and conversions.

4.5.5 LEANER SECTION

4.5.6 Content

4.5.6.1 ACTIVITY: Make your own collective mobile [LO 3.1, LO 3.2]

• These **3-D** shapes have been cut open. Do you recognise them? They have been enlarged on the next pages. Follow the instructions and make your own mobile for your room.

Figure 4.21

• Complete one shape at a time.

Instructions for all 5 shapes:

1. Writeyour name lightly on all the shapes.

- 2. Cut out 1 of the shapes neatly along the outlines (black lines).
- 3. Punch holes where it is marked with a o.
- 4. **Decorate** the **outside**of the shape with your own patterns.
- 5. Fold along all the dotted lines.
- 6. Mark the grey sections. These must be folded over so that they can be pasted down.

Practise the folding over before you glue them.

- 1. **Apply glue** onto one grey section at a time and paste it.
- 2. Complete the shape and leave it for the glue to dry.
- 3. Follow the same steps until all the shapes have been completed.
- 4. Match the 3-Dshapes to the 2-Dshapes on p. 23 and write their names.
- 5. Tie a piece of thin fishing-line to every shape.

12. Tiethe shapes to a small plank and there hangs your mobile!

4.5.7 Assessement

Learning Outcome 3: The learner will be able to describe and represent characteristics and relationships between two-dimensional shapes and three-dimensional objects in a variety of orientations and positions.

Assessment Standard 3.1: We know this when the learner recognises, identifies and names two-dimensional shapes and three-dimensional objects in the environment and in pictures;

Assessment Standard 3.2: We know this when the learner describes, sorts and compares twodimensional shapes and three-dimensional objects in pictures and the environment. CHAPTER~4.~TERM~4

4.6 Distance⁶

4.6.1 MATHEMATICS

4.6.2 Bonny and Tommy at the sea

4.6.3 EDUCATOR SECTION

4.6.4 Memorandum

It will probably only be learners in the first group who will progress as far as this module. Do not discourage learners who want to do this module. Even if they can only do a few of the activities they must be given the opportunity to do so. This must be handled carefully so that learners are not discouraged or feel inferior towards other learners. Neither must they develop negative attitudes towards Mathematics.

- Number concept to 2 000
- Operations: Consolidation and reinforcement of all the operations in previous modules.

A considerable amount of advanced and enrichment work is included and the educator must be familiar with each activity before the learners are expected to complete them.

In Module 8 number concept is extended to 2 000. All operations are revised and consolidated. Several enrichment and challenging activities are included in this module and should only be given to learners who can manage them and who enjoy challenges. This selection process must be handled carefully and the other learners must not be discouraged or feel inferior towards other learners or the subject Mathematics.

A thorough discussion and explanation of the map on p. 3 as well as the table of distances on p. 4 should help learners complete these worksheets.

Number concept is extended to 2 000.

This is consolidation of the operations as in the previous modules. It offers an opportunity to identify problem areas.

These are to determine to what extent the learners' logical thought processes have developed and to test and consolidate the basic work.

Telling the time on digital clocks/watches should only be done with learners who have mastered the telling of time on ordinary (analogue) clocks/watches. They need much practice in telling the time on ordinary clocks/watches and the corresponding time on digital clocks/watches before completing the worksheets.

Give the learners the opportunity to do these problems without help so that their progress can be determined.

Show examples and discuss ethnic patterns with the learners. Encourage them to bring examples to school and to share these with the class.

Use this for assessment purposes.

This is enrichment work and the educator should study this work first and then decide which of these worksheets should be used for which learners.

All learners who have progressed to Module 8 should be able to complete these worksheets with ease.

Do this activity practically in the classroom and let several learners explain what they see in front of them when walking behind someone. Let three learners stand next to one another and let the other learners stand in front of them. They must walk around the three standing in a line and observe them from behind so that they can discover that the order from left to right has changed.

Not much explanation is needed here as this activity is similar to the one where they used the table of distances.

4.6.6.1 ACTIVITY: Distance [LO 1.8, LO 3.2, LO 3.6, LO 5.5]

Bonny and Tommy are very excited because they always spend December holidays at the sea.

• Draw your own picture of the beach. I want to see what it looks like there and all the things you can do.

Last year Bonny and Tommy went to Durban with Mom and Dad. This year they are going to Cape Town. They live in Kimberley.

See whether you can find these places on the map. Mark them.
Mark the vicinity where you live and write the name of the town

 \bullet Read the distance on the table. It is ____ km. • Calculate the **difference**between the two distances.

 Mark the vicinity where you live and write the name of the town of city on the map. Is this near toor far from Kimberley? 	
It is	
 With your pencil mark the route on the map clearly that Bonny and her family will take from K berley to Cape Town. Write down all the names of the towns along the route you have chosen. 	im-
Kimberley	- 7
Town.	Сар
• Estimate how far Kimberley is from Cape Town ?	
I guess it is km.	
• Use the table of distances on p. 4 and read the distances.	
It is km.	
• Did you estimate too many, too few or just right?	
I guessed	
• Look at the map again and estimate:	
Is Durban nearer or further away from Kimberley than Cape Town ? I guess

How to determine the distance between two towns or cities. Find the two places on the table: one on the horizontal line and the other on the vertical line. Move across and down until the two meet. That is the distance between two places.

Figure 4.27

- The distance between **Kimberley** and **Durban** is coloured in on the table as an example. These cities are **825** km apart.
- Choose a friend and practise some readings.

Die afstand tussen Kaapstad en Johannesburg is 1 421 km.

The distance between Cape Town and Johannesburg is 1 421 km.

Use the map on p. 3 first to estimate the distances and then look on the table on p. 4 to read the distances. Do it with a friend.

Towns or cities					
Horizontalline	Verticalline	Estimation	Reading	Just right / Too many / Too few	
Johannesburg	Pretoria				
Bloemfontein	Beaufort West				
East London	Queenstown				
Port Elizabeth	George				
Pretoria	Nelspruit				
Kimberley	Beaufort West				
Durban	East London				

Table 4.6

CHAPTER~4.~TERM~4

• Calculate the <u>sum</u> of the distances between <u>Bloemfontein</u> and <u>Beaufort West</u>, and <u>Port Elizabeth</u> and George.

- We live in Pretoria and Dad works in Johannesburg. How many kilometres does he travel in one day?
- How many kilometres does he travel in five days?
- It took five hours to travel the distance between <u>Kimberley</u> and <u>Beaufort West</u>. How many kilometres did we travel in one hour?

4.6.7 Assessment

Learning Outcome 1: The learner will be able to recognise, describe and represent numbers and their relationships, and to count, estimate, calculate and check with competence and confidence in solving problems.

Assessment Standard 1.8: We know this when the learner can perform calculations, using appropriate symbols, to solve problems:

Learning Outcome 3: The learner will be able to describe and represent characteristics and relationships between two-dimensional shapes and three-dimensional objects in a variety of orientations and positions.

Assessment Standard 3.2: We know this when the learner describes, sorts and compares twodimensional shapes and three-dimensional objects in pictures and the environment.

Assessment Standard 3.6: We know this when the learner reads, interprets and draws informal maps of the school environment or of an arrangement of three-dimensional objects and locates objects on the map.

Learning Outcome 5: The learner will be able to collect, summarise, display and critically analyse data in order to draw conclusions and make predictions, and to interpret and determine chance variation.

Assessment Standard 5.5: We know this when the learner reads and interprets data presented in simple tables and lists.

4.7.1 MATHEMATICS

4.7.2 Bonny and Tommy at the sea

4.7.3 EDUCATOR SECTION

4.7.4 Memorandum

It will probably only be learners in the first group who will progress as far as this module. Do not discourage learners who want to do this module. Even if they can only do a few of the activities they must be given the opportunity to do so. This must be handled carefully so that learners are not discouraged or feel inferior towards other learners. Neither must they develop negative attitudes towards Mathematics.

- Number concept to 2 000
- Operations: Consolidation and reinforcement of all the operations in previous modules.

A considerable amount of advanced and enrichment work is included and the educator must be familiar with each activity before the learners are expected to complete them.

In Module 8 number concept is extended to 2 000. All operations are revised and consolidated. Several enrichment and challenging activities are included in this module and should only be given to learners who can manage them and who enjoy challenges. This selection process must be handled carefully and the other learners must not be discouraged or feel inferior towards other learners or the subject Mathematics.

A thorough discussion and explanation of the map on p. 3 as well as the table of distances on p. 4 should help learners complete these worksheets.

⁷This content is available online at http://cnx.org/content/m32338/1.1/>.

Number concept is extended to 2 000.

This is consolidation of the operations as in the previous modules. It offers an opportunity to identify problem areas.

These are to determine to what extent the learners' logical thought processes have developed and to test and consolidate the basic work.

Telling the time on digital clocks/watches should only be done with learners who have mastered the telling of time on ordinary (analogue) clocks/watches. They need much practice in telling the time on ordinary clocks/watches and the corresponding time on digital clocks/watches before completing the worksheets.

Give the learners the opportunity to do these problems without help so that their progress can be determined.

Show examples and discuss ethnic patterns with the learners. Encourage them to bring examples to school and to share these with the class.

Use this for assessment purposes.

This is enrichment work and the educator should study this work first and then decide which of these worksheets should be used for which learners.

All learners who have progressed to Module 8 should be able to complete these worksheets with ease.

Do this activity practically in the classroom and let several learners explain what they see in front of them when walking behind someone. Let three learners stand next to one another and let the other learners stand in front of them. They must walk around the three standing in a line and observe them from behind so that they can discover that the order from left to right has changed.

Not much explanation is needed here as this activity is similar to the one where they used the table of distances.

4.7.7 Assessment

Learning Outcome 1: The learner will be able to recognise, describe and represent numbers and their relationships, and to count, estimate, calculate and check with competence and confidence in solving problems.

Assessment Standard 1.1: We know this when the learner counts forwards and backwards in:

1.1.1 the intervals specified in grade 2 with increased number ranges;

Assessment Standard 1.3: We know this when the learner knows, reads and writes number symbols and names from 1 to at least 1 000;

Assessment Standard 1.4: We know this when the learner orders, describes and compares numbers; Assessment Standard 1.5: We know this when the learner recognises the place value of digits in whole numbers to at least 3-digit numbers;

Assessment Standard 1.6: We know this when the learner solves money problems involving totals and change in rands and cents, including converting between rands and cents;

Assessment Standard 1.7: We know this when the learner solves and explains solutions to practical problems that involve equal sharing and grouping and that lead to solutions that also include unitary and nonunitary fractions (e.g. $\frac{1}{4}$, $\frac{3}{4}$);

Assessment Standard 1.8: We know this when the learner can perform calculations, using appropriate symbols, to solve problems;

Assessment Standard 1.9: We know this when the learner performs mental calculations;

Assessment Standard 1.10: We know this when the learner uses the following techniques:

- 1.10.1 building up and breaking down numbers;
- 1.10.2 doubling and halving;
- 1.10.3 number-lines;
- 1.10.4 rounding off in tens.

Learning Outcome 4: The learner will be able to use appropriate measuring units, instruments and formulae in a variety of contexts.

Assessment Standard 4.2: We know this when the learner solves problems involving calculations with and conversions.

4.8.5 LEANER SECTION

4.8.6 Content

4.8.6.1 ACTIVITY: Digital clocks [LO 1.8, LO 4.1]

Bonny and Tommy can tell the time on an ordinary clock (analogue clock) but now we must see whether they can tell the time on a digital clock.

The **digital clock** shows the full **24 hours** of day. It ranges from **midnight** to **midnight** the following day. That is the reason why the letters a.m. (before noon) and p.m. (after noon) are not used. (antimeridian, post-meridian).

- On the ordinary clock the time is written as: 1 a.m. or 1 p.m.
- On the digital clock the time is shown as: 1:00 and 13:00.
- The hours after 12 o'clock, midday, are counted on. They don't begin from 1 o'clock again but from 13 hours.
- The minutes are written after the colon and means so many minutes after the hour has past.

These are times between midnight and 12 o'clock in the afternoon:

Figure 4.39

• What is the time?

Figure 4.40

• Write the correct time on the digital clocks:

Figure 4.41

- Now we are going to work with the **hours aftertwelve o' clock** in the **afternoon**.
- We write the hours like this:

 $13:00\ 14:00\ 15:00\ 16:00\ 17:00\ 18:00 \\ 19:00\ 20:00\ 21:00\ 22:00\ 23:00\ 24:00$

	rom these hours on the digital clock then you know e afternoon on the ordinary clock.
Digital clock:	Ordinary clock:
15:00	3 p.m
22:00	
16:00	
24:00	
19:00	
13:00	
The minutes come a	fter the colon:
We are only going to	read the half hours and the quarter hours.
Digital clock:	Ordinary clock:
15.15	a quarter past 3
18:30	half past 6
21:45	a quarter to 10
14:15	·
19:30	
12:45	

Figure 4.42

• What is the time on the ordinary clock?

Figure 4.43

Use any method to solve the problems.

• We left Kimberley at 6:00 and arrived in Cape Town at 16:45. We spent an hour on the way to fill up on petrol and to stretch our legs. How long did we actually **travel**?

• School begins at 8:00 in the morning and finishes at 14:00. **Bonny** and **Tommy** played tennis until 16:15. How much longer than usual was their school day?

- Last year dad caught a fish of 8 kg. Tommy caught a fish of 3,25 kg. What was the difference in mass of the two fish?
 - · Later Bonny caught a fish of 1,50 kg. What was the total mass of their catch?
 - · An octopus has eight arms. How many arms have 20 octopuses altogether?
 - · A starfish has five arms. I saw 75 such arms in the sea. How many starfish were there?

4.8.7 Assessment

Learning Outcome 1: The learner will be able to recognise, describe and represent numbers and their relationships, and to count, estimate, calculate and check with competence and confidence in solving problems.

Assessment Standard 1.8: We know this when the learner can perform calculations, using appropriate symbols, to solve problems;

Learning Outcome 4: The learner will be able to use appropriate measuring units, instruments and formulae in a variety of contexts.

Assessment Standard 4.1: We know this when the learner reads and writes analogue and digital clock time in terms of hours, half-hours, quarters of an hour and minutes.

- How many tiles are needed to cover the whole floor?
- Write a number sentence to show how you did the calculation.

Number sentence:

You multiplied the **length** and the **breath**.

If I want to find out how big the space inside a rectangle is, I can say: length x breadth = space inside (area), therefore:

Area = l x b

Length x breadth gives us <u>squared units</u> and we write it as: mm^2 , cm^2 of m^2

 $9 \text{ cm} \times 4 \text{ cm} = 36 \text{ cm}^2$. The 2 at the top indicates that you have measured the area with <u>cm squares</u>.

Area =
$$1 \times b$$
 ____cm × ___ cm = ___cm².

Figure 4.48

• Calculate the area of the square.

Figure 4.49

The length is 5 cm and the breadth is 5 cm, therefore it is 5 cm x 5 cm = 25 cm^2 . Take 25 counters and make a square with them. Draw them. There are five rows of 5.

• Take nine counters and make a **square** with them. Draw them. There are ______.

Because the length and the breadth are equal it is unnecessary to ask what the length and what the breadth is. Ask: What is the square root of 9? The square root of 9 is 3.

- Take 16 counters and make a square with them. Draw them. There are ______.
- What is the square root of 16? ____ Write:
- Take four counters and make a square with them. Draw them. There are _____.
- What is the square root of 4? ____ Write:
- Draw the squares on the squared paper. Write how many blocks in each square.
- Colour them in.

Figure 4.50

• Complete each row:

Figure 4.51

• How many groups of ten can I make?

• How many groups of hundred can I make?

• Rename:

• Join:

• Fill in >, < of =:

• Make each number 1 1 1 more:

• Complete:

Figure 4.52

• Follow the fish to discover the chest of diamonds!

Figure 4.53

It has been a long year and your teacher is tired. Help her to mark the work.

- $\bullet~$ Write the correct answer where you find mistakes.
- 1 332 is an even number.
 - 2 195 is an even number.
 - 1998 > 1989
 - 1824 < 1842
 - $1\ 000+300+63=1\ 336$
 - $1\ 643 = 1\ 000\ +\ 500\ +\ 143$
 - $1\ 505\ \mathrm{comes\ just\ before}\ 1\ 506$
 - $1\ 999\ \mathrm{comes\ just\ before}\ 1\ 998$
 - 566 doubled is $1\ 012$
 - The halve of 1 840 is 920
 - $2 \times 349 = 698$
 - $624 \div 3 = 206$
 - 1 637 is 3 more than 1 640.
 - 1 785 is 5 less than 1 790.
 - $1\ 675$ is halfway between $1\ 670$ and $1\ 680.$

Mark the correct word with a [U+F0FC]:	True	False
A rectangle can have 3 right angles.		
A sphere has the shape of a ball.		
An isosceles triangle's sides are all the same length.		
A cool drink tin is cylindrical.		
An egg is spherical.		
A rectangle has 4 right angles.		

Table 4.9

• Underline the correct word:

A (right angle / obtuse angle / acute angle) is 90° .

A cube has (4 / 6 / 8) faces.

An equilateral triangle has (1 / 2 / 3) sides that are equal.

• Write holiday stories for these number sentences and do the calculations.

$$167 + 205 + 99 = 750 - 145 - 260 = 34 x 3 - 57 = 255 - 191 \div 4 =$$

• Mom, Dad, Bonny and Tommy are walking along the sea. Colour in the picture.

Figure 4.54

• You are walking directly behind them. Draw what you see in front of you.

It is the last school day of the year.

Bonny and Tommy want to say good-bye because at 6:00 tomorrow morning they are leaving for Cape Town.

• Decipher their greeting:

Dwars → Af ↓	I	2	3	4	5	6
1	٨	T	G	М	Р	N
2	В	W	Z	I	С	Q
3	0	F	S	K	٧	Х
4	R	J	L	0	Н	E
5	u	D	М	Z	T	W
6	F	S	K	R	Y	A

Af	1	3	5	6	2	4	1	3
Dwars	2	1	5	2	4	6	6	3
Oplossing								

Figure 4.55

4.10.7 Assessment

Learning Outcome 1: The learner will be able to recognise, describe and represent numbers and their relationships, and to count, estimate, calculate and check with competence and confidence in solving problems.

Assessment Standard 1.4: We know this when the learner orders, describes and compares numbers;

Assessment Standard 1.8: We know this when the learner can perform calculations, using appropriate symbols, to solve problems;

Assessment Standard 1.9: We know this when the learner performs mental calculations;

Assessment Standard 1.10: We know this when the learner uses the following techniques:

- 1.10.1 building up and breaking down numbers;
- 1.10.2 doubling and halving;
- 1.10.3 number-lines;
- 1.10.4 rounding off in tens.

Assessment Standard 1.12: We know this when the learner checks the solution given to problems by peers.

Learning Outcome 2: The learner will be able to recognise, describe and represent patterns and relationships, as well as to solve problems using algebraic language and skills.

Assessment Standard 2.2: We know this when the learner copies and extends simple number sequences to at least 1 000;

Assessment Standard 2.4: We know this when the learner describes observed patterns;

Learning Outcome 3: The learner will be able to describe and represent characteristics and relationships between two-dimensional shapes and three-dimensional objects in a variety of orientations and positions.

Assessment Standard 3.1: We know this when the learner recognises, identifies and names twodimensional shapes and three-dimensional objects in the environment and in pictures,

Assessment Standard 3.5: We know this when the learner recognises and describes three-dimensional objects from different positions;

Learning Outcome 4: The learner will be able to use appropriate measuring units, instruments and formulae in a variety of contexts.

Assessment Standard 4.6: We know this when the learner investigates (alone and/or as a member of a group or team) and approximates.

About Connexions

Since 1999, Connexions has been pioneering a global system where anyone can create course materials and make them fully accessible and easily reusable free of charge. We are a Web-based authoring, teaching and learning environment open to anyone interested in education, including students, teachers, professors and lifelong learners. We connect ideas and facilitate educational communities.

Connexions's modular, interactive courses are in use worldwide by universities, community colleges, K-12 schools, distance learners, and lifelong learners. Connexions materials are in many languages, including English, Spanish, Chinese, Japanese, Italian, Vietnamese, French, Portuguese, and Thai. Connexions is part of an exciting new information distribution system that allows for **Print on Demand Books**. Connexions has partnered with innovative on-demand publisher QOOP to accelerate the delivery of printed course materials and textbooks into classrooms worldwide at lower prices than traditional academic publishers.
